ROYAL COMMISSION INTO VICTORIA'S MENTAL HEALTH SYSTEM

Held via Zoom

On Thursday, 18 June 2020 at 10am

Before: Ms Penny Armytage AM (Chair) Professor Allan Fels AO Dr Alex Cockram Professor Bernadette McSherry

Counsel Assisting: Mr Stephen O'Meara QC Ms Georgina Coghlan Ms Fiona Batten 1 THE CHAIR: Welcome to the Commission's panel discussion on 2 how to support people living with mental illness and 3 problematic alcohol and drug use.

I'm Penny Armytage, the Chair of the Royal Commission into Victoria's Mental Health System. I'm joined by my fellow Commissioners: Professor Allan Fels, Dr Alex Cockram and Professor Bernadette McSherry.

On behalf of the Commission, I acknowledge the traditional owners of the lands on which we meet, and I pay my respects to their Elders past, present and emerging.

14 Before we commence, I would like to thank Dr John 15 Reilly, Professor Dan Lubman and Dr Stefan Gruenert for 16 taking the time to participate in today's panel. I know 17 that each of you has already contributed significantly to 18 the Commission's work in the development of your witness 19 statements, and in preparation for today's panel 20 discussion.

We are conscious that this contribution has occurred during the challenging time of the current pandemic and we appreciate that you will have had other pressing work related to the pandemic response. The pandemic, and its mental health impacts, have emphasised to the Commission how critical a stronger mental health system for Victoria is now, and into the future.

30 The purpose of these hearing panels is to explore and 31 contest ideas through a shared discussion. While the forum for our hearings has evolved in the current environment, we 32 know that the most powerful insights for our work occur 33 when we engage in discussion with experts and with those 34 with lived experience. The Commission has continued to 35 engage widely across the community, utilising online forums 36 37 such as this to continue its engagement work.

This panel is focussed on how to support Victorians who have a mental illness and co-occurring alcohol and drug issues. It will focus on how the future mental health system can better support adults and young people, how the mental health and alcohol and drug sectors are currently responding to people with co-occurring needs and what lessons can be learned from other jurisdictions.

38

In our community and expert consultations, we

1 frequently heard about the complex and unique challenges 2 for consumers with co-occurring mental health and substance 3 use issues. This panel has been convened because the 4 opportunities to reform extend beyond the mental health 5 system, and into other service systems.

7 We know that currently many people with co-occurring 8 mental health and substance use issues are not receiving integrated care. Some consumers are falling through the 9 gaps between mental health and AOD services or are 10 experiencing lengthy delays to access either. 11 The 12 Commission has received submissions that highlight how consumers are bounced between mental health and AOD 13 services; deemed too unwell for AOD treatment or ineligible 14 15 for mental health services because of their substance use. 16 These experiences can seriously undermine the health of consumers as they wait for access or attempt to navigate 17 complex and siloed services. For those that do seek help, 18 19 we have been told about experiences of double 20 discrimination and stigma associated with mental illness and substance use. For example, a participant in our 21 consumer focus group explained that: 22

23 24

6

25 26

27

28 29

30

31

32

40

45

You be honest and say you use drugs. They give you lectures about how bad drugs are for your mental health but for me, it's the only thing that makes me feel better.

We also heard about the impact of these issues on consumers and families during our community consultations. For example, one family told us that:

There is no integration for people with mental health issues and AOD issues. There are no facilities, there's no referral points and the constant refrain I got from her mental health team was that until she recognises she has a problem with alcohol, there is nothing we can do.

41 This situation is concerning considering the insights 42 from experts across many sectors that the co-occurrence of 43 mental illness and substance use should be understood as 44 "the expectation rather than the exception."

46 The Commission understands that estimates of the 47 prevalence of co-occurring substance use with mental

2 people with mental illness. 3 4 The Commission has also heard of the work of many 5 dedicated and compassionate professionals across the mental 6 health and AOD sectors, including those who are working to 7 bridge these gaps. During our community consultations we 8 heard about how even a short intervention at a critical point for a consumer can place them on a path to recovery. 9 10 According to one participant: 11 12 When my son was going to discharge himself following an alcohol-induced admission to 13 hospital they had one psychiatric nurse go 14 and see him. They spoke with him for 20 15 16 minutes and he agreed to become a voluntary 17 patient in [an inpatient unit]. This changed his life. 18 19 20 Recently, we have met with primary care and community health services that are providing integrated care for 21 consumers with co-occurring mental health and substance use 22 23 We have heard from consumers and carers who access issues. 24 these services about how a welcoming, non-judgemental and 25 holistic response from empathetic and skilled professionals has changed their lives. 26 27 28 We have read with keen interest your respective witness statements, and it is evident that you bring a 29 wealth of expertise and experience to this topic, along 30 31 with thoughtful and progressive reform ideas. 32

illness nationally range from 25 per cent to 68 per cent of

There are areas of broad agreement across your 33 34 statements, including the need to improve consumer experience and address service silos, and an 35 acknowledgement that both services have much to learn from 36 37 each another and that there are opportunities to increase the capability of both workforces, the benefits of 38 39 integrated responses for consumers and the need to engage 40 young people through youth-appropriate and holistic 41 services. 42

The statements were in agreement on the importance of integrated care, treatment and support, particularly for people with more complex support needs. There was also agreement on the important role that peer support can play and the history of peer support particularly in the alcohol

1 and other drugs sector.

11 12

13

14 15

19

26

33

40

There are also key differences, including different perspectives on how integration should be pursued and at what level. Your witness statements also contained a breadth of research and local and international examples of how to address these complex issues for which we thank you all.

The purpose of this panel is to address both the areas of agreement and to understand more deeply divergent views. We are also keen to learn more about what reforms you would each see as vital for the future mental health system here in Victoria.

16Today's discussions will be facilitated by Counsel17Assisting, Fiona Batten, and I and my fellow Commissioners18have largely a listening role.

20 Before handing over to Fiona to outline the logistics 21 and parameters for today's panel's discussion I would like 22 to once again thank you for your time in assisting the 23 Commission with our deliberations. We look forward to 24 hearing your insights and perspectives on these complex and 25 challenging issues. Thank you, Fiona.

MS BATTEN: Thank you, Chair. I would first like to introduce our first three panel members and then I will outline the main areas to be discussed. The introduction is necessarily very brief and it doesn't do justice to their experience and contribution, to which I'd refer everyone to their witness statements.

In no particular order, Professor Dan Lubman trained as a psychiatrist and addiction medicine specialist. As the Executive Clinical Director of Turning Point and Professor of Addiction Studies and Services at Monash Health, Professor Lubman provides strategic, clinical and academic leadership.

Professor Lubman is also the inaugural Director at the
Monash Addiction Research Centre at Monash University.
Professor Lubman has published a substantial body of work
and his contribution to the field has been recognised
through a number of awards.

46 47

Dr John Reilly is the Chief Mental Health Alcohol and

Other Drugs Officer in Queensland. The latter title 1 2 reflects the integration of mental health and alcohol and 3 other drugs services in Queensland. 4 Dr Reilly has worked in clinical or Medical Director 5 roles for mental health services or components in both 6 7 Victoria and Queensland for over 20 years. He has clinical 8 expertise in addiction and has particular interest in 9 quality improvement, service development and governance. 10 11 Finally, Dr Stefan Gruenert is a registered 12 psychologist and the Chief Executive Officer of Odyssey House. Dr Gruenert has worked in the alcohol and other 13 drug sector for 20 years as a clinician and manager, 14 15 supporting people with alcohol and other drug problems and 16 their associated mental health issues. 17 Dr Gruenert is responsible for managing the range of 18 19 residential and community-based services Odyssey House He is a former President of the Victorian 20 delivers. Alcohol and Drug Association and a current Director of the 21 Victorian Council of Social Services. 22 23 24 As the Chair mentioned, each panel member has provided the Royal Commission with a written statement which will be 25 published on the Commission's website. Thank you to each 26 27 of you for your energy and dedication you've put both into 28 your statements and to this panel process. 29 30 In this panel hearing, to assist the Commission 31 consider how people with mental illness and substance use 32 issues can be best supported, the panel discussion will focus on five areas. 33 34 35 First, the strengths of the approaches of the alcohol and other drugs sector; second, addressing the needs of 36 37 people with mental illness and substance use issues; third, integration at a governance and policy level; fourth, 38 39 increasing workforce capability; and finally, the 40 priorities for the allocation of resources. 41 42 I will start by asking questions until approximately 43 11.30 and then give everyone a break for 10 minutes, and 44 we'll continue asking questions and then I'll hand over to the Chair at approximately 12.20/12.30 for the 45 46 Commissioners to ask the witnesses questions directly. 47

So, our first topic is the treatment philosophy and approach. The Commission understands that a strength of the alcohol and other drugs sector is that it adopts a holistic approach to treating consumers. In your experience, what are the strengths of the treatment approaches of the alcohol and other drugs sector?

Dr Gruenert, can I ask you to respond to this first.

DR GRUENERT: Thank you, Fiona, and Commissioners. I think two points I should make around the context of response to this question, and the first is that, whilst there is some overlap of clients across mental health and alcohol and other drug sector currently, they work with very different cohorts by and large, which means that the strengths and weaknesses of one sector can't necessarily be compared with the strengths and weaknesses of the other, and I think in most cases the alcohol and other drugs sector is working with moderate-to-severe alcohol and other drug problems, and mild-to-moderate mental health issues. Those issues are things like anxiety, mood disorders, PTSD, personality disorders, and the effects of trauma.

Mental health services in contrast are dealing mostly with moderate-to-severe and low prevalence mental health issues, and often very mild-to-moderate drug and alcohol issues.

29 So, in terms of the actual strengths, I think some 30 comments made by the Chair about consumer input are really 31 important. I think the safety and the welcoming 32 environment that's non-judgmental and that gives consumer 33 choice is clear, sort of, markers of a strong drug and 34 alcohol sector.

36 I think the integration of peer support is a key 37 strength of the alcohol and other drug sector, and that it's generally experienced by consumers as an egalitarian 38 39 partnership where they feel really part of the decisions 40 and part of the involvement in that work, and I think that 41 occurs both at the community-based service level all the 42 way through to residential programs, and it's also part of 43 the system for mild, moderate and severe issues around drug 44 and alcohol, and I think it really brings much more 45 effective outcomes as we've seen in research for 46 participants in sustainable recovery when there's strong 47 peer involvement.

17

18 19

20

21

22 23 24

25

26 27

28

35

2 Finally, at this point I'd probably just add also, 3 another strength is the capacity for the drug and alcohol 4 sector to integrate the care and support from a range of different disciplines, again in guite a partnership and 5 egalitarian way, and that includes medicine, psychiatry, 6 7 psychology, social work, nursing and the lived experience, without a strong divide between clinical and psychosocial 8 services that often exist and are referred to guite 9 frequently within the mental health system. 10 11

I think that assures that all of the associated health, behavioural and social issues are addressed within drug and alcohol services, including forensic and issues of criminality, legal issues, vocational and housing needs.

MS BATTEN: Thank you, Dr Gruenert. Professor Lubman, can
I turn to you next in terms of the strengths of the AOD
sector.

PROFESSOR LUBMAN: Thank you, Fiona, and thank you to the Commissioners for this opportunity. So, I fully endorse the comments made by Stefan. I suppose there's just a couple of things I'd like to raise in thinking about this point.

27 Nearly everyone that we see in the alcohol and drugs 28 space are using drugs to solve a problem, to help with dysphoria or distress or issues in their lives, so they're 29 30 presenting to us with a solution to the problem they have 31 that's not working for them, you know. So, the alcohol and drugs are emotional analgesics that are helping them deal 32 with underlying mental health, stress, life, a whole range 33 of life complexity. 34

36 And so, when we see people in the alcohol and drugs 37 space our core focus is understanding that the drug use is the solution to their problem and we need to work out what 38 39 the actual problem is, and so, we need to think 40 holistically with them to help them try and understand what 41 is underlying that, because for many people that we see 42 they're not really aware why they use drugs, they've just 43 used drugs for such a long time to address an underlying issue that over time the addiction itself has been the 44 primary issue, and the actual reason they started 45 using underlines that, which might be related to trauma, 46 47 untreated mental health, a whole range of other life

1

12

13

14

14

15 16

27

39 40

41

42

43

44

45

46 47 So, a big goal for us is around how we engage and work with people to try and understand where they're coming from and try to address the answers, not only just for how we treat the alcohol and drug issues, but how we treat the issues that actually led them down that path in the first place.

I think it's fair to say that the recovery models in both the mental health and alcohol and drug system are pretty similar theoretically in terms of policy documents, but I think it's really important to consider that the way in which the systems are designed actually influence how those principles are actually rolled out in practice.

17 I think it's fair to say that the focus within the mental health system on risk on the Mental Health Act, so 18 an involuntary system, has a major colouring in terms of 19 20 how the system sees and interacts and works with people, because there's a whole issue around the level of risk that 21 22 needs to be managed and concerns around when people are not 23 able to make informed decisions and the system has to step 24 in, and I think that colours a lot of the decision making 25 and lot of the way in which people are approached and dealt with within the system. 26

28 In contrast in the alcohol and drug system, we manage people who are incredibly risky, but we don't have that 29 30 involuntary frame, we don't have that risk frame. So, for 31 us in the alcohol and drug system, the only thing that we 32 have to be able to work with people is a willingness to engage, a willingness to be non-judgmental, to be empathic, 33 to hear where they're coming from, so our tools and our 34 approaches and our models of care have to be about how we 35 actually walk alongside people, how we encourage them to be 36 37 part of the system, how we hear what their issues are, and how we develop interventions that actually work for them. 38

Having worked in the mental health system where the focus is much more on risk and just the nature of the demand on the mental health system, often when you work in that system you don't have the luxury of waiting to work out and understand people's problems and be able to have the time to actually understand where people are coming from; it's much more that risk-based system.

Because of that, because of the system, and I think as we said throughout our submissions, because there's been the whole issue and a generation of health providers not being able to be upskilled in the area of addiction, the mental health system doesn't understand that drug and alcohol use is a solution to a problem.

So generally, what happens is, when you come into the mental health system, the mental health system says, well, drugs and alcohol make your mental health symptoms worse so you should stop using them. So, often the involvement that I have in the mental health system is often working with mental health providers to help them understand why people choose to use alcohol and drugs, and it's not because they're being difficult and because they're sabotaging their treatment, it is because that is, as Penny's highlighted, you know, the key solution to how they deal with trauma and distress in their lives.

And so, the focus of our treatment is, well, how do we find an alternative solution that actually is just as effective, because I cannot tell somebody to stop using drugs if I'm not giving them something that is effective for them to use, they're not going to stop that if they've been doing that for years without an alternative that is just as effective.

28 So, for me, I wanted to raise those issues really which is around issues of differences in the philosophy and 29 30 approaches of the systems based on the fact of risk and the 31 Mental Health Act which I think colours the mental health 32 system. The need for us to engage and so, our models of care are very much about that and that the peer experience 33 34 is critical, in that, making people feel as though they're the physical champions. 35

37 The other issue I wanted to raise is the stigma issue. The stigma issue is enormous. You know, addiction has been 38 39 repeatedly identified as one of the most stigmatised health 40 conditions in the world. And so, the media, what we hear 41 within health professionals and even the mental health 42 system is that, you shouldn't use drugs, they're bad. And 43 so, because of that for many of the people we see, they 44 don't want to go to services, they don't want help because every - you know, whether it's in the media, in the family 45 46 and friends or service systems, are constantly telling them 47 that they're making wrong choices. If it was just a matter

7 8

9

10

11 12

13

14 15

16

17

18 19

27

36

of choice, you know, people would be able to just stop using, but the issue is, this is a solution for a whole range of other problems and this is an actual mental health condition as I sort of reiterate in my statement.

6 And so, we also need to acknowledge that stigma is so 7 prevailing that the alcohol and drug system's philosophy 8 recognises how stigmatising these conditions are, so it's really critical that we have settings and services that are 9 welcoming to people and see them where they're at and don't 10 judge them, so we have to create an environment that 11 12 recognises that profound stigma, and unfortunately the mental health system still has a very - because of issues 13 of lack of understanding around the issue of addiction 14 15 because of years of a failure to train, you know, that 16 professional group, stigma is still very strong around the alcohol and drug issue and that becomes a very unwelcoming 17 environment for people presenting to those services. 18 So, 19 I've probably said enough.

21 MS BATTEN: Thank you, Professor. I'll give you more 22 opportunities don't worry. Dr Reilly, can I turn to you 23 for the strengths of the alcohol and drug sector.

25 Yes, thank you, Fiona, and thank you, DR REILLY: Commissioners. I'm just trying to think of what to 26 27 emphasise following the other discussions. I think what 28 I've tried to highlight is that I do think that there sometimes is this notion of the AOD sector and the mental 29 30 health sector and this question does include that, and I 31 think we just have to recognise some of the underlying, 32 perhaps, thinking around that because that still seems to imply some of those things that Dan and Stefan touched on, 33 which are, I think that it can be an unfair comparison 34 because we're talking about the AOD sector as being 35 separate, not having a - as has been highlighted - a 36 37 philosophy of perhaps more coercive treatments under the 38 Mental Health Act and not being risk focused.

40 But I do think that if you look - I don't think there 41 is any great difference in the AOD sector as opposed to a 42 broad mental health sector, I think that the comparison 43 we're talking about sometimes is between a broader AOD 44 sector with regard to multiple different types of services, with a narrowly clinical mental health sector which is 45 focused on the treatment of the most severely mentally ill, 46 47 and so, in a sense I don't think it's a fair or reasonable

5

20

24

39

comparison.

1 2

14

23 24

25

26

30

36

43

So I think, with that proviso, I don't disagree with 3 4 some of the other things that Dan and Stefan were saying, 5 but I think it's important to put that context in. Because 6 I think that good mental health treatment follows all of 7 the same principles that we've just been discussing with 8 regard to consumer choice and involvement and engagement and motivation to change, but clearly if we're looking at a 9 10 severe end of the mental health disorder spectrum with consumers and patients that perhaps have lost capacity and 11 12 are posing risk, then there is an expectation on the mental health services that they manage that risk. 13

Whereas, as Dan said, people with severe alcohol and 15 16 other drug problems may also pose risk, but in a sense the AOD sector doesn't take on the management of that risk, 17 that risk is left with the patient and then really with 18 19 wider community risk management processes, whether that's 20 police or other things, as well as potentially mental health services at times of crisis for people with severe 21 or significant substance use disorders. 22

So, otherwise I would agree with the strengths, I think those are the provisos that I would add in.

27 MS BATTEN: Thank you. I know you've got a lot to say but 28 I'll keep you moving along with the questions, so we get 29 through the main content.

The second topic is addressing the needs of people with mental illness and substance use issues. The first question seeks to explore what integrated care should look like in three contexts. So, I'll outline the question in full and then, Dr Reilly, I'll ask you to respond first.

To best meet the needs of people with mental illness and substance use issues, what should integrated care look like for people, first, who present to a crisis setting; second, who may benefit from assistance in a bed-based setting; and third, who may benefit from treatment in a community or primary care setting?

DR REILLY: Sure. So, what we're focused on here is people with mental illness and substance use issues. So, I guess what I would highlight there is, well, really though we're talking about people at a particular level of severity most likely of mental illness and a substance use disorder. And, if that's what we're talking about, we're talking about co-occurring substance use and their other mental health disorder which is causing them to seek treatment in some way, in this first instance to a crisis service, but obviously to health services more generally with any of these.

So I guess, and along the lines of the four-guadrant 9 model that I attached, I'm really thinking about that 10 severe substance use disorder and severe mental illness 11 12 group, and as I've outlined what we're really talking about in that case at least, crisis, is people who are probably 13 presenting to a mental health service specifically, they're 14 probably presenting, for instance, to an Emergency 15 16 Department or some form of an acute crisis setting, and they're really presenting, although they've got a severe 17 substance use disorder, they're presenting with some kind 18 19 of a crisis that could be called a mental health crisis you know, suicidality or homelessness that is causing them 20 21 distress, something of that sort.

23 In that situation, if they also then have a severe 24 substance use disorder, really the issue is trying to assist that person to recognise, a little along the lines 25 that Dan was just saying, what's the actual problem right 26 27 now and how might we then be assisting that person to 28 manage that, and that might be around suicidality, it might also then be around alcohol use or other substance use, and 29 then other psychosocial stressors at present and what's 30 31 going to be a solution for that person.

Really then, that comes back to, looking at integrated 33 care, ensuring that the person, the clinician or other 34 staff working within that crisis service actually has a 35 good understanding of how to engage that consumer or 36 37 patient or client in a process of assessment, working out 38 with them collaboratively what's going to be the most 39 appropriate strategy to assist them at this point, and 40 really having the knowledge and the skills to be able to 41 work with that person, you know, to do that effectively and 42 to be able to go across a range of different clinical needs 43 and for that to be in that sense a one-stop-shop where 44 they're able to manage those, at least the health-related issues, effectively and then that they've got links then 45 46 with other social situations. 47

.18/06/2020

8

22

32

And really therefore, in my mind again, that needs to come back to having those mental health clinicians feeling capable, confident of managing mental health issues broadly and that should include substance use and they're also then able to connect up with appropriate psychosocial supports, as I've said.

That therefore comes back to staff, it comes back to training, it comes back to attitudes, so we can touch on those later.

I think with regard to a bed-based setting I'd simply be saying the same thing. We've already touched on high prevalence, Commissioner Armytage started with that, we have to recognise that they are the norm and that therefore all of our clinical services, all of our staff need to recognise the importance of the managing co-occurring substance use disorders.

I think with regard then, I would simply say, well, that actually requires us to acknowledge that's just the norm and we need to have service systems which treat it as the norm, which again brings me back to the same issue, right, so that they're not compartmentalised, so that's about simply having that the mental health service system has to see this as its core business and then develop knowledge, skills and structures which support that.

I think the final one's much the same: if you're talking about community specialist services it's the same for community mental health services currently, that that's what they should be doing for the consumers that are presenting and receiving treatment within those community mental health services.

If you're thinking then, it says "primary care 36 37 setting", then really that's about having whatever the specialist service is that's been involved in that case in 38 39 transition to primary care, ensuring that all appropriate 40 health-related disorders that that service should be 41 looking at have been addressed, that the needs have been 42 identified and treatment recommendations have been made 43 that supports the general practitioner or other primary 44 care provider in continuing that care if it's now appropriate for it to be devolved to that level. 45 So, 46 thanks.

47

24

25

26 27

28

35

Thank you. Professor Lubman, can I turn to 1 MS BATTEN: 2 you next. Do you need me to repeat the question? 3 4 PROFESSOR LUBMAN: No, it's okay. I have a couple of 5 comments to start with. I think substance use is one of 6 the main precipitating and predisposing factors to mental 7 illness. It's also consistently shown to be one of the 8 strongest predictors of poor outcomes in terms of relapse and re-admission, so it's central to the treatment of 9 10 mental illness: if you don't treat the substance use, essentially you can't treat the mental illness. 11 12 So, for me, treatment of the substance use is 13 indistinguishable across those three settings: if you don't 14 15 treat it, you know, you're not doing anything for the 16 person's mental health and so it has to be a core part of 17 that treatment. 18 19 I suppose the nuance is, is the level of intervention 20 at those particular settings. So, for me, if somebody presents with a heart attack and they have underlying 21 diabetes, to say that we would not in any way recognise 22 23 that diabetes or think about stabilising that diabetes in 24 terms of priority, you know, treating the heart attack, you know, would be negligence in terms of a medical situation. 25 26 27 So, for me, it doesn't mean you have to have a 28 specialist in diabetes in the cardiology ward helping people deal with a heart attack, but it needs to be 29 30 recognised as something that needs to be stabilised in the 31 short term, and that there needs to be specialist review in terms of its treatment if it's a major factor in terms of a 32 cause for that heart attack. 33 34 35 So, for me, it's a cruel component. Work that we've done and other people have done have shown that it's 36 37 the biggest predictor of relapse following an inpatient admission. So, if it's the biggest predictor of relapse in 38 39 terms of inpatient re-admission within the next two to four 40 weeks, it beggars belief that it isn't a priority in terms 41 of a management plan, in terms of ensuring that person 42 stays well and remains well out in the community. 43 44 So, for me, I think everyone would agree that having a 45 capable workforce that has minimum knowledge and 46 understanding of how to manage these issues, so we would 47 expect doctors managing heart attacks to sort of understand

diabetes and be able to manage diabetes at the basic level. 1 2 You know, same here, we would expect that our workforce in 3 the mental health space would have a basic understanding 4 and capabilities in managing substance use, and then in the 5 particular - depending on the setting and the models we 6 want to put in place which we'll come to later, it's about 7 how do we bring in that specialist expertise to provide 8 additional support depending on where people are at.

10 So, in terms of an acute response, obviously we need to prioritise the main presenting complaint, but we need to 11 12 be acknowledging and working with that underlying substance use; as the person comes into the recovery phase, we need 13 to ramp up that support around substance use to make sure 14 that the recovery pathway is optimised and that we minimise 15 16 any risk of relapse and we ensure their wellbeing. So, 17 probably that's enough from me.

19 MS BATTEN: Okay, thank you. Dr Gruenert.

21 DR GRUENERT: Endorsing what Dan has said and much of what John has said, just a couple of additional points I'd like 22 23 I think it's important for us to remember that to raise. 24 much of the drug and alcohol use in Australia is neither 25 problematic or does not necessarily relate to a diagnosis of substance use disorder, and the mere presence of 26 27 someone's use of drug or alcohol needs to be considered but 28 not necessarily treated or managed whenever they're 29 presenting in any setting.

31 And so, I think the response that we take really needs 32 to consider the level of severity or what we're actually talking about, and so, for me the kind of critical things 33 regardless of the setting are the capacity of the 34 environment, the workforce, the staff to be able to 35 identify what's going on, to be able to assess and 36 37 understand the level of severity or the impact that's having and then to be able to have the skills to manage and 38 39 respond in an appropriate way.

So, from my perspective, I don't believe integrated care equates to integrated service systems, and I think integrated care can be done in a single setting within both sectors, and that's the ideal way to provide integrated care. I think an appropriately resourced drug and alcohol system and a mental health system can respond to both a person presenting with mental health or drug and alcohol

9

18

20

30

issues for all but probably the most complex cases with the
 right trained staff and support.

4 If we're looking at the different settings, I think it's fair to say that in any crisis, whether that's being 5 6 presented in ED or to the mental health service or to drug 7 and alcohol, that helping people to feel safe and welcome 8 so that you're at least getting a de-escalation of behaviours and a sense that people are empathic and they 9 care and they're seeking to understand you is really 10 critical, and so the knowledge and skills of the staff to 11 12 be able to do that in a credible way are critical and again we need those skills across both mental health and drug and 13 alcohol to be able to do that. So that, the language used, 14 the way people are approached when they're in crisis is 15 16 suitable, and I think I've referred to in my submission that much of the crisis is presented in a hospital setting 17 where you're either getting a very sort of clinical medical 18 19 response or a security response around the crisis, and we 20 really need other responses that are much more behavioural, that are understanding mental health and drug and alcohol 21 when people are presenting in that crisis. 22

24 In terms of the bed-based settings, I think it depends what bed-based setting you're talking about. 25 If we're talking about inpatient acute mental health, then again, 26 27 the points Dan made are really critical about identifying, 28 you know, someone's drug use being problematic, dependent, is it one-off episodic, is it just an intoxication that 29 30 brought them there, and what's really going on underneath, 31 the assessment around that, so that the better 32 understanding of the impacts on their mental health can be understood. 33

If you're talking about a residential setting in drug treatment, the key focus of that setting is really seeking to develop the skills and the capacity to address all those underlying problems that Dan talked about right at the start that are really the reason why people are using drugs and give them viable alternatives to that.

And so, the key need in that setting is to be able to have the right people around as part of the team to be able to manage and contain people's mental health symptoms until they can get to a point where they've developed the strategies and things to manage those on their own, and that may be pharmacotherapy but it might also be a whole

3

23

34

lot of psychosocial strategies. 1

2

4

5

6

7

8

9 10

11 12

13

18

27 28

29

37

44

3 Again, in a community setting, having staff and people who are skilled up and knowledgeable about both mental health and drug and alcohol is critical, so again, you can do that, identify, assess and then manage or integrate strategies into their care or treatment plan if that's even needed, because the drug use may not have been an issue or the alcohol use may not have been an issue in that setting. And you don't want the mere presence to suddenly trigger, oh, we can't work with you, you've got drug and alcohol issues, you need to go over there.

So, for me, regardless of the setting, there's those 14 fundamental things that need to be in place to make sure 15 16 the response actually matches what's going on for someone 17 and at the right level.

19 MS BATTEN: Just before we move on to the next question, 20 you've all talked about a base level of knowledge of the workforce but the potential need for more specialist 21 expertise in particular circumstances. What about the 22 23 scenario where someone has the most severe complex mental 24 illness and the most severe substance use issues, which I 25 presume would be a substance use disorder, what does the integrated model of care look like in that circumstance? 26

Professor Lubman, perhaps I'll turn to you first.

30 PROFESSOR LUBMAN: So, I think when we're talking about 31 severe in both ends, so we're talking about a severe 32 substance use disorder and severe mental illness. I think what's clear in all our submissions, and particularly the 33 work that we've done previously, is that there needs to be 34 a specific model of care for that patient group. 35 There isn't a model of care at the moment that exists. 36

At the moment we're asking our addiction services and 38 39 our mental health services to sort of make do with the 40 models they currently have, and I think what's been clear 41 through what we're hearing from consumers is, the current response is inadequate and doesn't meet the needs of people 42 43 presenting with those issues.

45 So, there needs to be the development of a new model of care that recognises the complexity of severe mental 46 47 illness and severe substance use disorders and actually

meets those needs.

1 2 3

4

5 6

7

8

21

25

33

37

I think in the submission we put in, and other people have put in, there's really great evidence-based models of what works in terms of models of care for that patient group; they just don't currently exist in Victoria and we don't have a system that is able to escalate.

I think that's one of the biggest issues, that when we 9 talk throughout the integration piece, is the need to 10 understand the ability for the system to escalate to be 11 12 able to identify what an issue is and whether that current response in the system is able to meet that person's needs, 13 and if it is not meeting those needs there's the ability of 14 the system to escalate to another model of care that isn't 15 16 just giving more of the same stuff by more of the same 17 staff, it's a very nuanced and different model of care that has been shown to be effective and has been shown and 18 19 resourced to actually meet the needs of that population 20 group.

- 22 MS BATTEN: Dr Reilly, you've already touched on this 23 fourth-quadrant group, is there anything that you wanted to 24 add about the model of care?
- DR REILLY: No, simply to say, I agree with what Dan is saying and I'm not suggesting at the moment that I think anyone's routinely in these services doing that well, but it is clear that it does need to be integrated, and therefore, in general it needs to be sitting with the mental health system with that responsibility and at the moment we're not taking up that particular challenge.
- MS BATTEN: Okay, thank you. Dr Gruenert, is there anything else you wanted to add to that layer of model of care?

By and large I agree with the comments that 38 DR GRUENERT: 39 Dan made and John made terms of the need for a model like 40 that. I think there are some examples where it is an 41 escalation point from drug and alcohol and they're just 42 starting to be trialled in Victoria with sort of an 43 enhanced residential setting. I don't think they've quite 44 got the capacity around mental health that are required to 45 really deal with the severe end there.

- 46 47
- I think you've got two challenges in that

fourth-quadrant in the most complex group. One of them is 1 2 dealing with any initial and immediate needs around 3 withdrawal and, you know, where someone's drug and alcohol 4 use is so out of control that it's physically dangerous and 5 harmful for them and it needs to be carefully managed in a 6 Likewise, in mental health when someone's really wav. 7 unwell, you know, the management of those systems and 8 containment for the person's safety is really critical.

10 But then we move into a different stage where, if we've got a severe drug and alcohol issue and clearly this 11 12 has been problematic for them for a very long time and merely going through withdrawal might have alleviated the 13 initial concerns and symptoms and safety for that person, 14 15 and you can do a whole lot of work with them, but unless 16 all those underlying issues are dealt with in a very 17 intensive way you're not going to get resolution, so I think we do need to develop a much more nuanced response 18 19 there that really has equal input from across drug and 20 alcohol and mental health and is an escalation point for the sector, because I think they'll be willing to take on a 21 lot more in their own sectors to do the best they can if 22 23 there is that back-up of an escalation point.

25 MS BATTEN: Thank you. Professor Lubman has suggested in 26 his witness statement that ideally integrated care should 27 be provided in a single service setting to minimise any 28 additional barriers to care.

So, the question is, is a single treatment setting required in all mental health settings?

Professor Lubman, can I invite you to respond first.

35 PROFESSOR LUBMAN: Yeah, thank you. I suppose my comments 36 are largely related to an ideal state and really reflect 37 the issue that we shouldn't be segmenting and 38 compartmentalising people's issues into different - into a 39 whole range of different issues where they need to seek 40 treatment from multiple different treatment services and 41 providers in different environments.

The key thing is that we know that often, when people present, they present with a whole host of issues and they're looking for a solution from their treatment provider and the challenge is that often we identify multiple problems that we identify in that individual and

9

24

29 30

31

32

33 34

that we - because of the way in which our system is designed, we tell the person they actually need to seek help from multiple service providers rather than a single service provider, so the issue is more about the system response rather than what the individual's presenting with.

7 And so, I think the key principle that we all agree on 8 is that we should make, you know, seeking treatment as easy as possible for the individual; that when an individual 9 presents, that their needs are ideally met in a single 10 setting. That might mean that we need to upskill the 11 12 workforce in those settings to be able to - at a base level to be able to provide most of those persons' treatment 13 It might need, in some situations we might need to 14 needs. 15 co-locate services and actually work together.

The important thing to say here though is that co-location doesn't necessarily equate to integrated care, because there's lots of examples where services co-locate but actually still don't work together, so it's more about how we commission services on the expectations of that commissioning and how we monitor what services are providing.

It's about, at an organisational level, the inter-agency partnerships and treatment philosophies and shared goals and it's about, at the service level, at the staffing level, how we work together with our colleagues in other fields to actually provide a much more seamless treatment response.

So, for us the principle is really about ease of access, treating the people where they're at, not making the treatment more difficult by having them need to go to multiple services to receive that need.

37 Obviously, we work in an environment where we can't cover everyone's needs: there might be physical health 38 39 issues, mental health issues, substance use issues, housing 40 issues. It's going to be difficult to have all those 41 co-located or in one setting, but the principle that we 42 need to work towards is, we make it as easy as possible for 43 the consumer and we have those capacities in those services 44 to meet those persons' needs so that we can maximise their 45 engagement and ensure they have the best possible holistic 46 response.

47

6

16

24

31

1 MS BATTEN: Thank you. Dr Reilly, can I turn to you.

3 DR REILLY: Yes, look, I would agree and I think that 4 consumer choice can sometimes be the issue, and so, there 5 may well be circumstances where a consumer may prefer to see two separate providers for what they are considering as 6 7 two separate issues, but that would be unlikely in most 8 instances if the consumer is thinking that the person who they are seeing has the capacity to manage their problems 9 in an integrated way, you know, I would see that as not 10 being a likely scenario but of course it might happen on 11 12 occasion.

And I'd agree with what Dan's saying, I think that 14 there are inevitably some boundary points. We can think 15 16 that it would be good, for instance, for someone who's got - say, who may also need treatment for Hepatitis C, for 17 chronic pain as well as for an opioid use disorder and has 18 19 a severe depressive disorder that they're seeking treatment It's going to be very difficult for any one service 20 from. provider to make sure that they're addressing each of 21 those, and there are of course going to be some boundaries, 22 23 so it's really about trying to configure services in such a 24 way that they are most generalist whilst still providing 25 the appropriate levels of specialist care.

27 MS BATTEN: Thank you. Dr Gruenert.

29 DR GRUENERT: Yeah, when I was speaking to some young people in preparation for this, some of them have said 30 31 things like, "My issues impact on lots of areas of my life, 32 my housing, my family, my relationships. There's drug and alcohol issues, there's mental health issues, but I don't 33 see myself as complex. What's complex is the system and 34 the things, the hoops and hurdles I have to jump through to 35 try and get someone who can actually hold that picture of 36 37 me together."

I agree there's a tension between, you know, ensuring all systems are generalist enough that they can hold that picture, that they can do those assessments and identify things and see a person as a whole person, whilst not replicating every part of the system within, because there's some real value in having some specialist systems who are really key in what they do.

46 47

2

13

26

28

38

I think the issue of choice is important too, and

certainly we found that, whilst we have been able to 1 2 provide some vocational services for example to some of our 3 clients, they actually have a better experience when they 4 engage with a specialist vocational service who can be with 5 them for the long journey throughout their recovery and 6 help them find employment over multiple occasions rather 7 than feeling dependent on us who got them through the key 8 part of their journey. So, sometimes there is a value in seeing a specialist, you know, a sexual assault counsellor 9 who really is at their peak of working on that particular 10 issue, but it needs to be based on a foundation of 11 12 generalist care where the case management and the treatment planning and everything are put together in a way that 13 incorporates and considers and understands that whole 14 person and can sequence some of these things with them or 15 16 prioritise what you're going to work on and they don't feel 17 like they have to engage in so many different trusting relationships. 18 19

So, as a general rule for most people single setting is the ideal you're aiming for, but of course there's exceptions and boundaries to cross at times.

PROFESSOR LUBMAN: Can I just make one (indistinct).

26 MS BATTEN: Yes.

20

21

22 23 24

25

27

30

36

PROFESSOR LUBMAN: I just wanted to give an example whichI think is really helpful.

We've been fortunate to be able to trial a whole range of different integration models over the past 10, 15 years, and the models that have the most success is when we're able to embed workers in other people's services and create models of care that actually work.

37 So for example, we had a pilot project where we were able to put an alcohol and drug nurse in an inpatient 38 39 mental health unit for 12 months. So, that position was 40 supernumerary to the existing sort of mental health staff, 41 and they were there bringing addiction expertise. So they 42 were there to provide in-service training to the nurses, 43 they were there every day, so that they were there at 44 handover to be able to ask the question around substance use, so became much more familiar in the assessments and 45 46 the management plan. 47

They were able to hand-hold people in the system in terms of treatment of withdrawal within that setting, and they were able to facilitate referrals out of the system to the broader alcohol and drug system in which they work.

And that model worked really well. We saw a massive increase in screening for substance use disorders, a greater confidence in workforce in terms of managing people with substance use disorders, we saw a greater number of people who actually had good withdrawal plans while they were in the inpatient setting and were actually linked to services.

Then the funding ran out and within six months the services returned back to what they were doing previously, you know, in terms of not screening, not doing many withdrawal plans, not linking the services.

So the issue is - and when we've had models where we 19 just fund a service, for example, to provide an addiction 20 nurse within the service setting, what inevitably happens 21 because of the budget constraints and issues within systems 22 23 is that, that position is only within that service and 24 isn't linked, we don't get that external linkage to the other parts of the system. And then through budgetary 25 constraints what almost invariably happens is that person 26 27 gets absorbed into the general pool of nursing so that it 28 doesn't become a specialist position over time.

29 30

31

32

33

1 2

3

4

5 6

7

8

9

10

11 12

13

14 15

16

17 18

So for me there's really great examples of how we integrate services by actually embedding workers within each of the services.

We did another project where we had mental health 34 workers when I was working at Orygen in my team and we had 35 them embedded within YSAS and another youth alcohol and 36 37 drug service. Again, they were embedded, they actually worked there, they were providing mental health treatment 38 39 to people who present at that service, so we trained up the 40 alcohol and drug workforce to do screening, to identify, to 41 build a capacity, and have a referral point for actual 42 treatment, and that worked, again, really well, increasing 43 people's confidence and capability in managing a whole 44 range of risk issues that they previously were not happy to 45 do and wanted to refer to the mental health system. So, we were able to manage that within the system, increasing 46 47 people's capability and then the funding ran out and those

people left and we went right back to where we were. 1 2 3 So there's really great models of imbedding workforces 4 in our respective systems to actually create that 5 integration, to increase capability, to increase traffic 6 and trust and ability to refer across the system, so 7 there's really great models where we can do this, but it's 8 important that we work in partnership and we build on those evidence-based principles. 9 10 Just quickly, other than funding, was there 11 MS BATTEN: 12 anything else needed to sustain those kind of models? 13 14 PROFESSOR LUBMAN: I think, as I say in my submission/witness statements, we've done a whole range of 15 16 work around what good integrated care looks like. 17 Integrated care is at four different levels: it's at the commissioning level, it's at the organisational level, it's 18 19 at the service level, and it's on the ground with the 20 clinicians. So, funding is one component of that, but if there isn't a commissioning framework that says this is a 21 priority for us and we're going to measure that, and if 22 23 there isn't an organisational priority that says we've 24 recognised that this is a really important way in which we 25 need to provide good care to our client group or to our patient group, and we want to work in partnership with our 26 27 local providers, if there's not agreement at the service 28 level that we want to do this in terms of best practice and 29 we have models integrating that. 30 31 So, funding's obviously critical, but we have to have all those other elements in because otherwise it becomes 32 just an ad hoc sort of individual response that's not in 33 any way systematised, so we have to think about, you know, 34 the entire system and all those different elements to make 35 sure it remains a success and is not dependent on 36 37 individual personalities. 38 39 Did anyone else want to comment on anything MS BATTEN: 40 that Professor Lubman's just said before I move on? 41 42 DR REILLY: No, perhaps later. 43 44 MS BATTEN: Thank you. We were talking before about 45 single setting care, so the next question is: are there viable alternatives to fully integrated or single setting 46 47 care in certain mental health settings?

So, Dr Reilly, perhaps if I turn to you first, are there viable alternatives.

DR REILLY: Yeah, look, of course there are viable alternatives. I think along the lines - in a sense when I'm talking integrated care, I guess what I'm saying is that a team or a clinician is providing that care fully by that clinician or within that team.

Now, then it comes down to, well, are you expecting 11 12 that clinician, therefore, to have all of those skills or are you expecting that it might be something that works 13 across, say, perhaps a wider multidisciplinary team. 14 And I think, if you go with the latter, then certainly it's 15 16 possible for people to have portfolios of particular interests, and I think that the examples that Dan just gave 17 are kind of examples of that, where you're perhaps 18 19 suggesting that in a team, whether it's a community team or 20 an inpatient-type service, that perhaps someone's got a portfolio. 21

23 I think the challenge though then with that still 24 becomes that there's always the risk that, if it's not fully integrated but there are people - that it's kind of 25 compartmentalised to some degree, there is the risk that 26 27 others still tend to see that as being someone else's 28 responsibility rather than assuming full responsibility, and that means that in their individual clinical 29 30 interactions in other contexts perhaps that doesn't work.

32 So, I think that it is possible but I'm just not, you 33 know, I would see that you would have to be really clear 34 how it's going to work, what the requirements will be if 35 you're going to separate it out and not have that as an 36 expectation that all mental health clinicians should 37 actually be capable of managing in an integrated way.

39 MS BATTEN: Okay, thank you. Dr Gruenert, can I turn to 40 you next.

DR GRUENERT: If I pick up a point that Dan raised early on, that one of the most powerful tools we have in the work we do in the drug and alcohol sector, and I'd argue in many parts of the mental health sector, particularly the psychosocial end, is the capacity to engage with people and be there as a sort of non-judgmental credible person.

1 2

3

4

5

6

7

8

9 10

22

31

38

This is often one of the biggest issues and one of the biggest difficulties for many of the people seeking our help, because they've had their trust damaged on so many occasions and they've struggled with their relationship skills.

We know in sustainable recovery from both drug and alcohol and mental health issues, that positive, strong relationships and relationship skills are one of the key predictors of long-term success.

So, if we're trying to assist someone who often comes 13 with all sorts of issues, damaged relationships, difficulty 14 15 in trusting, the biggest challenge is establishing a 16 relationship with someone where they can build that trust and build those skills, and this is also why so many peer 17 support programs work particularly well, because they can 18 19 share the ideas and thoughts and go on that journey together with other people that have had similar 20 experiences, at least as part of their treatment. 21

23 So again, regardless of the model you're using, 24 whether it's co-location, whether it's embedded staff in one service, whether it's a highly skilled generalist 25 that's got the multiple skills, I think the aim is really 26 27 trying to minimise the number of different people, or even 28 if it's a multidisciplinary team where there's multiple different specialities, of course you're going to have 29 better specialists in a multidisciplinary team and each one 30 31 of them will be better at their particular thing than just 32 one generalist. But we always come back to this point of trying to limit the number of people and different contact 33 points that someone has to engage and develop that 34 relationship with in order to receive their care, their 35 36 understanding, their assessment, at least initially.

38 So, I think all of us would agree that these are 39 issues people have been struggling with for ages, I don't 40 think there's a perfect solution just sitting there ready 41 for us to go - people have tried many different ways of approaching this, but I think it is a fundamental that we 42 43 need to limit the number of people they're having access 44 to, or that are delivering that care, and the more we can 45 support that person or that team of people with help the 46 better, whatever the model looks like.

37

1 2

3

4

5 6

7 8

9

10

11 12

1 MS BATTEN: Okay, thank you. Professor Lubman, do you 2 think there are viable alternatives to fully integrated or 3 single setting care?

5 PROFESSOR LUBMAN: I mean, I think there's not much really 6 to add to what Stefan and John have said. I think the 7 principle is there, I think we're a long way from that, I 8 think there's steps along the path in terms of how we can 9 get there.

For me, it's not integrated care, for me it's just good care. It's how do we provide good care, and the integration is really around, what are the different support systems around that that we can build in to create a much more optimal experience?

So, in terms of providing good care, yeah, we should definitely be providing good care in every setting. How do we integrate some of the specialist services together to actually create a much better treatment experience? There's certainly lots of models out there that we can draw on and I think there's a lot of literature out there of what does work.

25 And I suppose it's around - I think one of my biggest frustrations in the system is that - is we don't recognise 26 27 when we're not doing a good job. So, when people are 28 struggling in the system, we don't really have good mechanisms of escalation, I think it comes back to this 29 30 again. So, when something's not working, the system - it's 31 very difficult for the system to step back and ask what is 32 wrong with the system. You know, very much it's about the individual, so, the individual isn't motivated, the 33 34 individual isn't responding to treatment, the treatment's not working, the medication isn't working yet. 35

But sometimes it's about the system not actually being the right system for that individual, and we don't really have mechanisms to step back and ask, you know, how can we nuance the system, or what different system approaches can we take to actually meet the needs of that individual and, you know, we're often left having a very generic service model that we just plant everywhere.

So, for me one of the biggest things out of this is,
how do we think about recognising that different people
need different things, and we need to work out how we

4

10

16

24

36

provide the best quality response for the person, for them, and we need to recognise when it's not working and we need to work out how we escalate to different models that might be better.

So for some people we might say, they might have severe mental illness, but actually they're going to do much better in some of the alcohol and drug spaces with the right support, or they might be better in the mental health system with a bit of alcohol and drug support.

I think we direct traffic based on what the services thinks best, not what the individual thinks best, and I think really that's a challenge I think for all of us to think about how are we to design a system that actually best meets the needs of individuals and best gives them what they need to optimise their health.

MS BATTEN: As the Chair said, the Commission is speaking directly with people with lived experience to understand their perspective, but in your experience what are the benefits of an integrated experience at the frontline for consumers?

Dr Gruenert, can I ask you that question first.

27 DR GRUENERT: Look, I think we've touched on many of the 28 benefits already. I think for a consumer to have a single touch point, to tell their story once, to have their - who 29 30 they are as a person and what they're struggling with 31 understood without having to compartmentalise, it is a much more satisfying and rewarding experience, and it's also 32 rewarding for the staff when you can actually see people 33 achieve success and make steps in their journey when it's 34 done in that particular way, and I think the outcomes are 35 typically better. 36

I think Dan's point is really critical. We employ a 38 39 lot of staff with a lived experience in our services, and 40 one of the biggest things we have to do during that 41 orientation phase is to help them understand that, what 42 worked for them doesn't necessarily or isn't necessarily 43 going to work for everyone else who accesses the system. 44 So, for some people it's the pharmacotherapy that was the 45 thing; for some it was those peer support groups; for other people it was the sort of psychological strategies or 46 47 repairing a relationship, and it's really important that we

5 6

7

8

9

10 11

18

24 25

26

37

do have the diversity and we encourage and nurture that 1 2 across our systems to allow that, both the choice of the 3 consumer and often they make a lot of choices. Sometimes 4 the system tries to feed them in one particular direction 5 but they often come with a clear idea of what they want or 6 what they think will work for them, and if we have a system 7 that does acknowledge that, then it's a much more 8 satisfying experience for the consumers. 9

10 MS BATTEN: Dr Reilly, is there anything that you have to 11 add to that?

Perhaps just that, I think Stefan highlighted DR REILLY: 13 before relationship, and if you've got integrated 14 experience, then you've got a greater capacity then to 15 16 focus on maybe building a relationship with a person who's going to be actually taking a more comprehensive and 17 holistic perspective rather than separating out and telling 18 19 you to go off and see at least two different services, that 20 obviously enables you to engage.

I think it minimises - potentially at least, it minimises duplication and allows you therefore to have a more comprehensive whole perspective on that person from a service point of view and I think consumers can feel that if that's done well.

28 MS BATTEN: Thank you. Professor Lubman, is there 29 anything that you wanted to add to this question?

31 PROFESSOR LUBMAN: Yeah, I mean, I think we've covered a 32 lot of it here but I just wanted to emphasise what Stefan 33 raised around staff.

35 I mean, a lot of the time that we get involved in sort of working with services to look at complex clients, which 36 37 as we've already heard is less about the complexity of the individual but the complexity of the system. You know, 38 39 staff are often very frustrated because they don't know 40 what to do, they don't have the capability, the skills, 41 they're often left with somebody who's not getting well, 42 and staff can feel very frustrated because they don't know 43 what to do and then there is a tendency to blame the 44 individual for that lack of response.

46 So, for me, working in this integrated space and 47 having worked with a whole range of workforces in terms of

12

21

27

30

34

45

building their capability and providing that level of support, I think one of the most remarkable things is to see the level of optimism and hope return to the workforce, and that then gets dissipated, you know, to clients and families.

7 I think the most frustrating thing is, if the staff 8 and the service don't know what to do, that from a client and family point of view when they're coming to that 9 10 service and they're getting a response which is essentially, you know, the frustration of the service not 11 12 knowing what to do, you know, I think that's a terrible experience for clients and families. And, families are 13 struggling, they don't know what to do often with the 14 substance use, they don't know how to respond, they're 15 16 looking for professional advice around what to do, and if the service also doesn't know what to do, they don't know 17 how to properly support the families to actually provide 18 19 the best and optimal care to the individual.

So, an integrated response is, you know, critical at 21 so many levels, and it's critical really in terms of 22 23 re-energising the system in terms of building its - you 24 know, hope. Really, you know, hope is lost a lot in the 25 system because people don't know what to do and they feel stuck, so we want to engender a system that actually 26 27 promotes hope. We've got to make sure that staff 28 themselves feel confident that they know what to do and 29 that they have options available to them.

MS BATTEN: Thank you. Finally, in terms of addressing people's needs, the question is: is a different approach to integrated care needed for young people?

Professor Lubman, I might stay with you. In your
 view, is a different approach needed for young people?

38 PROFESSOR LUBMAN: I think at a broad level it would be 39 fair to say, no. I think good integrated care where we're 40 meeting the person where they're at and we have the right 41 level of supports for them I think is critical. Obviously 42 there's a number of youth relevant models because of, you 43 know, developmental stage, or age, or how we better 44 integrate families at that stage, I think, might be key.

46 But I think broadly, no; no, I don't think there is 47 differences. There's differences obviously in the type of

6

20

30

34

37

45

substances young people use, in how they might present, in how they might engage; we need to bring in developmentally relevant evidence-based strategy around that, but in terms of the principle of integrated care and access, I don't think there's much difference in terms of what we've been saying.

8 MS BATTEN: Thank you. Dr Reilly, do you have a comment 9 on the models for young people?

No, I'd emphasise - sorry, echo what Dan said, 11 DR REILLY: 12 and therefore the only comment would be that it's perhaps recognising that young people then are sometimes dealing 13 with different service systems, sometimes related to how 14 health sets up or mental health sets up, and therefore if 15 16 we're talking about other aspects of culture and workforce 17 it's important to be as holistic as possible in our thinking because it might be a different group to the ones 18 19 that we're proposing to think about.

21 MS BATTEN: And, Dr Gruenert?

DR GRUENERT: Echo those comments, no difference to the approach or broad philosophies, the way they're implemented can be completely different to make sure they work with young people.

28 The point I'd add to all of what's been said is, for young people it's critical to have - engagement's critical 29 30 - and you only get that with credible staff who can 31 understand and, I guess, feed back that experience to the 32 young people and because, without that engagement, you're not going to get the effective partnership approach and the 33 34 motivation and compliance, or the working together around the implementation of all the treatment goals and things 35 that you've got. 36

The second thing I think that's possibly in its 38 39 implementation is slightly more of a challenge or different 40 is the way we work with families alongside young people. 41 Obviously families are important for people anywhere across 42 the spectrum including with adults. You know, they're an 43 untapped resource and the service systems don't 44 particularly integrate the work with families particularly 45 well across the spectrum.

46 47

7

10

20

22

27

37

It's particularly critical for young people - so much

of the pathway that they're on can be alleviated or 1 2 diverted if we can get the relationship with families. 3 Now, that's a real challenge for many people working with 4 young people who are often a younger age, because that 5 engages well with young people, and therefore they often 6 don't have quite the experiences around parenting or 7 working with families, and they often have a lack of 8 confidence in doing that.

10 So, I think the family work is really critical with 11 young people, but broadly the approaches are the same, it's 12 just how they're implemented and nuanced in the youth 13 models.

15 PROFESSOR LUBMAN: Can I just add (indistinct)?

17 MS BATTEN: Of course.

9

14

16

18

28

19 PROFESSOR LUBMAN: I suppose one of the challenges we 20 often see in some parts of the sector is, you know, obviously with young people, you know, and their strive for 21 independence at a critical age, that some experiences with 22 23 staff that we see in these services can misconstrue the 24 independence as independence from family and supports, and there can be tensions in terms of, you know, how do we best 25 engage that family in providing that critical support 26 27 setting around them.

So, the young person might say they don't want to have 29 anything to do with their family, but we know from working 30 31 with people that getting their family to re-engage and 32 building those supports is critical for that person's long-term recovery. But if you're - you know, as Stefan 33 says, one of the issues we'll come onto is around 34 capability in workforces, but if you're an inexperienced 35 worker who doesn't come and isn't trained in family-based 36 37 approaches, you know, they can inadvertently make the situation worse by siding with the young person and 38 39 actually working against the family rather than with the 40 family, and I think that's really critical in terms of when we think about our models of care and when we think about 41 42 the capability of the workforce; sometimes we underplay the 43 important role and skill set around family-based practices. 44

45 MS BATTEN: Dr Gruenert and Professor Lubman, you've both 46 mentioned different engagements, young people engage 47 differently, what does that mean in terms of providing

care, how do you better engage young people then? 1 2 3 Sorry, Professor Lubman, can I turn to you first. 4 5 PROFESSOR LUBMAN: So, I suppose often when we see people 6 in the adult space, we're seeing people who have struggled 7 with problems for a long time, and have had lots of 8 reflections about what's going on with them, and in some ways more articulate around their needs and what they're 9 10 looking for. 11 12 Often for a young person there's a lack - you know, there's obviously a lack of life experience, there's a lot 13 of things going on for them that can be extremely 14 bewildering and confusing, and it can often - you know, 15 16 they can often - it can often be difficult for them to articulate what they really need. 17 18 19 So, the big difference I think in young people is 20 around how you meet the person where they're at, you know, particularly for the young person, and find some common 21 ground, and identify an issue that they want to work on. 22 23 So, it's about identifying the issues that they want to 24 work on and being able to work on that. 25 So for them that might be something around studying, 26 27 or school, or work, or housing or Centrelink payments. The 28 critical thing is, it might not be working on their alcohol and drug or mental health issues in the first instance 29 30 because for them that is not the priority that they see. 31 You know, it's that flexibility to be able to build that 32 relationship by identifying what are the one or two issues that they think are the priority that they need to work on, 33 and by demonstrating that you can actually be helpful in 34 that space and actually do something for them, that builds 35 that level of trust that actually you might be a useful 36 37 worker to work alongside, and that then allows that broader conversation to develop around those other issues that 38 39 you're trying to target. 40 41 So it's that flexibility to not just be focusing on

41 So it's that flexibility to not just be focusing on 42 the clinical response which is important, because for that 43 person that might not be their priority and it might not be 44 something they're ready to engage with; it's that ability 45 to have that broader panacea to build that trust so that 46 you can actually address the real issues that are 47 underlying where that young person is struggling.

MS BATTEN: Thank you. Dr Gruenert, is there anything that you wanted to add to that?

DR GRUENERT: Agree with Dan's comments, but I would add a couple of things. This is a real classic example of where there's a tension, and there's many parts of the system where it's finding the balance of the tension that works really well.

And the tension I'm talking about is that, we know sort of supportive counselling or aligning yourself with where someone's at is the best way to engage someone but it doesn't necessarily bring about change. And we know the psychoeducational things and setting boundaries and having a sort of challenging dialogue can be really effective in bringing change, but people lose engagement and they drop out of treatment and that doesn't work either.

So, the best way this is done is where you have those two things in tension with each other, and we've all heard of examples of services where it's all about sport and recreation, rock climbing and fun staff, Hip Hop, dance classes, whatever, spray painting, and if that's all it is, sure people will come along but there's nothing that's actually taking them to the next level.

And vice versa, a service that's based on a whole lot of evidence of the actual interventions and tools, you know, if young people aren't getting there, then it's not effective either, so it's walking that line.

The one point I would make that we've found most 33 effective, it's not just with young people, but it's 34 particularly there: the people most likely to engage 35 someone and take them to the next level are the people with 36 37 a lived experience who (indistinct - audio malfunction). So, if we can take someone who has been there fairly 38 39 recently who can understand where someone's at but has 40 moved through it, they are the best person to identify 41 exactly what's going on for someone, use the right language 42 for them, and so, in some ways asking us or asking me as an 43 expert what's going to engage young people is probably not 44 the - I can share my observations, but we've got to ask 45 young people.

46 47

1 2

3

4

7

8

9

10

11 12

13

14 15

16

17

18 19

27

32

And I totally agree with Dan, we've got to start with

- what they want, what's their priority and their goals and their dreams to build that relationship, and over time we need to then put the things in place that we know are going to bring about change.
- 6 And at times when a young person is out of control, 7 you know, the voluntary system doesn't do that, and we see 8 people cycle around, they're given lots of opportunities to engage, they simply don't, and I think there is some place 9 for a non-voluntary front-end to the system that, when 10 people come out the other end say, they can acknowledge I 11 12 was out of control, I needed someone to pull me up, and I can see how I was going downhill in a particular direction 13 but at the time I couldn't see that. So, it is a tension. 14
- 16 MS BATTEN: Thank you. Dr Reilly, was there anything that 17 you wanted to add to engaging young people?
- 19 DR REILLY: Sorry, can you hear me still?
- 21 MS BATTEN: Yes, I can, thank you.
- 23 DR REILLY: Suddenly I muted everyone, it seems.
- 25 MS BATTEN: That's okay, I can hear you.

27 DR REILLY: So I think what I would say there is, in 28 response to what Stefan just said though, I agree it would 29 be great, it's just a bit difficult to see how you would 30 govern that issue of the involuntary treatment at the 31 front-end for those problems but fascinating to see.

MS BATTEN: The next topic is governance, and I'm just noticing the time, so I might give you a break now rather than break-up the governance topic. So, I'll give you a break for 10 minutes and then we'll come back with the last topics: governance, workforce capability and prioritising. Thank you very much.

40 SHORT ADJOURNMENT

- 42 MS BATTEN: Thank you. The next topic is governance. The 43 first question is, how could Victoria integrate governance 44 and policy of mental health and Alcohol and Drug Services 45 at a departmental level?
- 46 47

5

15

18

20

22

24

26

32

39

41

Dr Reilly, can I ask you that question first, please.
DR REILLY: Sure. Look, I don't actually know how down in Victoria because I'm not really familiar with how its Department of Health works, but clearly it's all within a Department of Health, the Departments of Health are configured in various ways and of course they do at times with regard to governance shift branches and divisions or whatever within them.

10 So, I think it's really - the key issue is a clear 11 decision at the level of, you know, the Executive of the 12 Department and the Minister that that's a policy position 13 that the Government and then the Department wants to take 14 forward, and then it's considered what are the issues 15 associated with that and I think if that happens then it's 16 actually a comparatively straightforward matter.

The Queensland experience essentially was that, I 18 19 think it was more at a departmental level but obviously 20 with Government approval, and I think the challenge then of course then becomes one issue particularly perhaps that 21 alcohol and drug services - or alcohol and drug policy 22 23 relates to perhaps more the prevention aspect and that 24 there are some larger issues that sit within Health but 25 outside more clinical service delivery policy, and so those challenges need to be considered in such a decision. 26 So, that's all I would say at this point. 27

MS BATTEN: Sorry, just to keep you for a second. From your perspective what would the best model of integration look like in terms of governance and policy, maybe reflecting on what Queensland's done and what's worked well there?

35 Sure, well, the Queensland decision was DR REILLY: essentially that the clinical aspects of AOD policy needed 36 37 to be linked with mental health policy and commissioning, and so they were connected up, and so it is a mental health 38 39 and alcohol and other drugs branch and I'm in that Chief 40 Mental Health Alcohol and Drugs Officer role, but that's 41 comparatively new and that links to the Chief Psychiatrist 42 role. 43

44 So I think the issue is that there's overarching 45 governance across both mental health as well as alcohol and 46 other drugs sitting at a particular point, because that 47 creates the incentive then for integration at other levels,

1

9

17

28

1 in my mind at least, and a clear understanding that's the 2 case.

4 You can then have separateness further down, because 5 there are still a whole variety of things that will have to 6 be dealt with separately. Certainly, even if there was a 7 clear decision you wanted to integrate everything, you'd 8 still have to do a very graduated progress of changing commissioning funding and the structures, and I'm not 9 suggesting that, just saying it would require that kind of 10 machinery change and that would be difficult. 11

13 So I think it's about how you just make sure that at 14 the policy inter-planning level that those things are 15 considered always together rather than being completely 16 separated out.

18 MS BATTEN: Okay, thank you. Professor Lubman, from your 19 perspective what would be the optimum model of integration 20 of governance and policy and at the departmental level?

PROFESSOR LUBMAN: I think as we've all been saying, you cannot treat the mental health issue without treating the alcohol and drug issues. For me that means a single Department that overseas both the mental health and the alcohol and drug sectors, and which oversees things like performance, planning, quality, policy development.

Now, it's critical that there's a shared vision around the mental health and wellbeing of Victorians and, you know, as I say clearly in my submission, alcohol and drug issues/addiction is a mental health issue so it needs to sit within that framing of other single departments. So, that's commissioning, oversight, performance and quality issues.

I think the other point I want to make though, that while that's at the commissioning and policy level, I'm also very clear that the systems need to be separate. I think as we've already discussed, that there's marked differences in the populations that they serve, the treatment philosophies, the approaches they take.

And so for me, while we have an oversight and a single governance and a single Department, the systems themselves need to be commissioned and oversighted separately but within that overarching framework.

3

12

17

21

28

36

2 Because I think, you know, as I say in my witness 3 statement, the examples - obviously John can talk about 4 Queensland - but certainly in other areas the mental health 5 system is such a much bigger beast than the alcohol and 6 drug system and, you know, obviously with a whole range of 7 drivers around demand and around risk and around a whole 8 range of other issues, the major risk is that the alcohol and drug system becomes subsumed within the broader mental 9 health system and I think it's really important that we 10 keep them distinct and keep them separate because of their 11 12 separate workforces and approaches and interventions and philosophies. 13 14

15 The other thing to say about governance that I've said 16 in my witness statement is around the role of quality and The Chief Psychiatrist's office obviously plays a 17 safety. really important place in oversighting critical incidents 18 19 and safety issues and really plays a critical role of 20 building the effectiveness and the safety of the system. That is currently absent in the alcohol and drug space. 21 We don't have a mechanism at a system level for oversighting 22 23 critical incidents and reviewing safety issues, identifying 24 innovation and documenting that and evaluating and sharing 25 that across the system.

So there needs to be a mechanism, like there is in 27 28 Safer Care Victoria for the broader health network and within mental health within the Chief Psychiatrist's office 29 30 to actually look at system oversight, look at critical 31 incidents, look at issues of quality and safety and ensure that we're continuing to improve and that there's a culture 32 of quality improvement and there's key lessons there to 33 learn around how we approach different issues. 34

I sit in on a number of committees on the Chief Psychiatrist's office around critical incidents, morbidity and mortality, complex cases, and, you know, 90 per cent of all of them involve alcohol and drug issues and yet I'm the sole representative from the whole system.

You know, what constantly comes up is issues in terms of system integration, issues to do with capability, issues to do with monitoring and quality indicators, so there's a really important opportunity to bring that quality and safety component within the governance structure so that we can ensure that we continue to build the effectiveness and

1

26

35

1 efficiency and safety of the system.

2

6

11

20

30

37

43

MS BATTEN: Thank you. And, Dr Gruenert, from your perspective, what would the optimal model of integration look like at the governance and policy level?

7 DR GRUENERT: I think this is a really interesting and 8 difficult area and it's probably the one that we have had 9 the most struggle even as a panel and probably areas of 10 disagreement around.

12 I would agree with everything Dan has said around the potential for integration at the departmental level, and I 13 think in theory that should work, but I'm less convinced, 14 and I'm less convinced because history internationally and 15 16 history from my colleagues in New South Wales and Queensland continually tell me of its failings, and that 17 may be as much in the implementation as in the actual - you 18 19 know, the intention.

So, I think in theory there should be the capacity for 21 integration under a Minister, under an Executive at the 22 23 Department, as John was discussing, that has responsibility 24 for both those areas, and that they're integrated in a way that has a shared vision and where, particularly the 25 quality, as Dan was saying, the quality mechanisms and 26 27 processes that exist in mental health which don't in drug 28 and alcohol could really enhance other services in the systems and the planning happens together. 29

The issue for me is, fortunately in Victoria we have a Department of Health and Human Services, and I think the Human Services part of the Department has a really important part to play in the treatment of people with both mental health and alcohol and other drug issues when you're looking across the whole spectrum of that.

And so, one of the criticisms about the way it's often done in the departments is that there's not a broad enough perspective; it can take a sort of pure medical or psychiatric role at the expense of the lived experience and psychology and other things.

Now, if you've got someone who can really practise it
or does understand holistic medicine and the broad - you
know, that ideal, then I think that definitely will improve
the way the governance is done, but often that's not done

and it's tokenistic, and I think the points Dan made around 1 2 the size difference between the two Departments, or even if 3 they're distinct areas within a sort of an integrated -4 even at the Department level, they can get swamped and that again has been the experience of colleagues in other states 5 6 where the policy's often just developed in mental health 7 and it's AOD's consultation feels tokenistic or you're 8 always trying to fit a mental health policy into a drug and 9 alcohol setting.

And if I could use an analogy to describe what often happens: I talk about clothing, so we could all agree that, you know, tops and bottoms that we wear are important, they're both clothes. Most people tend to try and integrate their clothing between the top and the bottom, sometimes the style, the colour, or for a particular My kids always insist on only having shorts on climate. the bottom so they can play sport and it's fit for purpose, whilst they'll wear some pretty warm tops, and so, the choice around what people want in those areas is different.

But, no matter what you do to a top, you can't stretch 23 it or cut it or squeeze it to suddenly become shorts or a pair of pants. And it's even worse if the emphasis of the top you're wearing is just a winter coat and a jacket, and I'm thinking of the sort of clinical tertiary part of the mental health system, trying to turn that into a pair of shorts.

And so, we really need to make sure that the responses are fit for purpose and that the thinking, even on policy development, it isn't tokenistic and it has a broad representation to make sure that, yes, we're dealing with the quality of the clothes, you know, we want good shorts, but we don't need ski pants for someone who just wants shorts, they just need to be good quality shorts, and if they tear or rip we want to make sure they're built with the same quality of the fabric of the top and that we're thinking about the design with similar processes and ways but we're not trying to refit them.

42 That's in my experience what often happens in the 43 implementation. So, I agree in theory, I'm less convinced 44 as having seen it done well.

46 Could I just comment? DR REILLY:

10

11 12

13

14

15 16

17

18 19

20

21 22

24

25

26 27

28

29 30

31

32

33

34

35

36 37

38 39

40

41

45

1 MS BATTEN: Yes, of course.

3 DR REILLY: Because there's differences, this is probably 4 the area where we had most disagreement. I quess just to 5 highlight, I think there's always challenges with regard to 6 where you draw the line about how things are integrated, so 7 there's no question, there's no right way to do that, it's about what's going to work most effectively in a particular 8 scenario and who's prepared to push that. 9

11 There's no question that AOD services are going to 12 feel they're the small brother if they are integrated 13 within a wider mental health system that's larger, but I 14 also think there's lots of benefits to be gained from that 15 as well, which I accept, do require though a good 16 implementation, effective implementation of that whilst 17 looking after those interests.

19 I think though, we all certainly think, is it really such a unified mental health sector? There's marked 20 variation with regard to, for instance, the way in which 21 child and youth services or perinatal services or some 22 23 older person services or specialised eating disorder 24 services work within a Health Department and within a Mental Health Department or branch, and I don't think that 25 seeing AOD as a kind of subspecialty area within such a 26 27 wider more integrated mental health and alcohol and drug 28 branch is necessarily all that different.

I think also Stefan highlights that there are still issues with regards to what's perhaps more clinical healthcare as opposed to non-Government-led healthcare, and there's no question that Departments are doing funding out to different types of services, and again, we've probably brought those together and we haven't sort of come out always with the specifics of that.

38 So, there's no question there's challenges and I don't 39 think there's any absolute way to do those things.

MS BATTEN: Dr Reilly, just to stay with you, in terms of the potential adverse impacts for the alcohol and drug sector being overwhelmed by the mental health sector, what kinds of things has Queensland done to kind of guard against them and maintain the position of the alcohol and drugs sector?

47

2

10

18

29

37

DR REILLY: Sure. I think the issue is perhaps having 1 2 clear responsibility for that sitting with an Executive 3 who's got that responsibility where there's a recognition 4 that's really important; that is, that looking after the integrated alcohol and other drug services is important, 5 6 and I wouldn't necessarily disagree in what Stefan's saying 7 that Queensland has done that extremely well, but I think 8 that's something that we're continuing to look at and, once that's consolidated, that change, then I think that helps 9 to highlight that this is an ongoing need to be looking 10 after the AOD service system in the same way. 11

I think the only other thing I would say which I've 13 said previously is, in Queensland we've obviously got 14 fairly structured hospital and health services as our local 15 16 health networks. There's only 16 of those and they are, you know, independent; that's where the funding goes out 17 to, and each of those has their responsibility for both 18 19 their mental health and alcohol and other drug services being integrated under an Executive Director or equivalent. 20 Obviously there's a Chief Executive and a board, they also 21 have the responsibility for ensuring that AOD services are 22 23 being looked after within their HHS in the same way as 24 mental health services.

So I don't think it's just a departmental issue. But that then raises the issue of linkages with PHNs and then commissioning of NGOs, and there's no question that, in that regard, because of the way in which AOD services are structured, NGOs, there's not that sense of an area-based approach to quite the same level that there is historically in mental health services, at least in Queensland.

So, I think there's a lot of aspects of that question, 34 a lot of things that need to be considered and a 35 recognition, and I believe it might be more the case in 36 37 Victoria, that perhaps there's a misalignment and it's difficult to get planning to cohere across LHNs, mental 38 39 health services, AOD services, both clinically as well as 40 with regard to non-Government organisations being commissioned. 41 42

And, given that you've had a fairly different service system over time than perhaps Queensland's, there's no question that there's quite a challenge with trying to make such changes, and my observation over time has been, that's been quite a significant challenge purely from mental

12

25

health services. If you're then also then going to try and
 align AOD services up on that checkerboard, then obviously
 it brings significant additional complexity.

5 MS BATTEN: Thank you.

4

6

8

10

15

22

33

40

47

7 PROFESSOR LUBMAN: May I offer one point?

9 MS BATTEN: Of course, Professor Lubman.

PROFESSOR LUBMAN: Sorry, quickly just echoing what other people have said, I think one of the challenges that's come up during COVID - I mean, I think COVID has been really a great illustration of what works and what doesn't work.

So, what really happened during COVID was, what we saw was the mental health system sitting within a part of the Department that thinks of it as a system, was able to step up and create a whole range of responses that recognise what the system was and recognise the different components of the system.

23 The alcohol and drug system at the moment sits within 24 the community portfolio of the Department of Health and Human Services, alongside community health centres, 25 paediatrics, dentistry, opticians, all the other parts of, 26 27 I suppose, other industries that actually don't work as a 28 system, they're all independent - essentially independent businesses that sort of provide services but don't work -29 30 there's no sort of comprehension of that as a service 31 system and how the different parts of the service system 32 operate.

And I think that became really evident during COVID, that while the sector wanted to mobilise and think more from a sector perspective, the structures in place because of where it sat within a Department was not able to move as it could have - as it did in other parts of the health system.

And I think for us, you know, the issue in terms of commissioning and where the benefits would lie sitting more in that mental health space is thinking about service models. So, at the moment the way the service is commissioned in the alcohol and drug space are as widgets that are agnostic to service models.

A good example of that is an area that we're working 1 2 on together around the issue, for example, of residential 3 services. So, we have detox services across Victoria that 4 are funded, but there's no - but each of those services 5 operate in very different ways, and there's strengths in 6 that, but that is not through a process of being planned, 7 that we have these planned different services with 8 different staffing profiles, different models of care, different entry criteria, that's not planned from a system 9 point of view, that's just how they evolve, and yet we 10 expect people to try and navigate that system and 11 12 understand what that system is without any sort of system design and planning. 13

15 So for us, particularly in the alcohol and drug space, 16 we would really welcome sending in a Department that had a broader thinking around service and system design to think 17 about what the multiple needs of different client groups 18 19 and families actually are and how we actually configure the 20 system to build on the strengths within the system rather than it being an ad hoc system where it's, you know, 21 essentially a coin toss around what the response is going 22 23 to be where you present.

DR REILLY: Could I just make an additional comment, sorry?

28 MS BATTEN: Yes.

14

24 25

26

27

29

30 DR REILLY: And I guess just to follow on from Dan's 31 point, so perhaps to highlight that, is that, because in Queensland we've been trying to plan using the National 32 Mental Health Service's Planning Framework for mental 33 health services and have seen the benefits of being able to 34 35 do that so that we get greater consistency across the state, I think that because we've got a combined branch, 36 37 integrated branch, what the - so, the same people are responsible for planning of AOD services as for mental 38 39 health services, and they have been taking the lead in 40 trying to set the DASPM up, the Drug and Alcohol Services 41 Planning Model, in a sense to catch that up so that it's going to work in a similar kind of way to the National 42 43 Mental Health Service Planning Framework in Queensland. 44

45 So I think that that's an example of the benefit of 46 the integration of recognising that this is something that 47 mental health's doing that actually drug and alcohol services would benefit from, and where I think that will
 also add the capacity then to start having those two
 aspects talking together.

5 Just with regard to Dan's specific example, because we're an integrated branch, because we've got clinical 6 7 services within our HHSs, AOD clinical services, we 8 essentially were able to address alcohol and other drug issues, at least for the HHSs, in exactly the same meeting 9 10 structure as we were doing - it was mental health alcohol and drugs, it was completely integrated, we were 11 12 considering opioid-related issues at the same time as we were considering aspects of clozapine, for instance. 13

We did have some separate meetings with regard to AOD, just to sort of hone in on those more specifically, but there were certainly lots of advantages for us in being able to do that.

MS BATTEN: Thank you. Just in terms of this integration of governance and policy and, Professor Lubman, your comment that the AOD sector is much smaller and can be swamped, what are some of the adverse impacts that integration at that level could have on the AOD sector and what could be done to address those adverse impacts?

27 So, Professor Lubman, I might ask that question to you 28 first.

30 PROFESSOR LUBMAN: I mean, I think what we've all touched 31 on is this issue around a, in some ways homogenisation of 32 processes and policies and pathways in clinical care. Т mean, that's the biggest risk, is that, having worked 33 within an alcohol and drug service within a mental health -34 under a mental health director, you know, what became 35 really clearly evident is that our mental health colleagues 36 37 didn't really understand what we did or how we operate; and because they're managing a large mental health program, you 38 39 know, they don't have the time or focus to be able to 40 understand those nuances in the system.

And so, what we saw time and time again was, you know, a policy was developed in the mental health program, it was then sent over and say, well, this is going to be applicable across the whole mental health and alcohol and drug system, and so, things that we were not funded for or couldn't implement were endorsed as policy documents.

4

14

19

26

29

So, that relates to anything from - you know, and obviously sometimes these are relevant or not - but relates to issues around residential settings, around mental health, and there's a very different focus around ligature points and the way in which - you know, safety of those settings, which are very different to some alcohol and drug settings which are more recovery and community-focused.

Differences in terms of risk profiles, so for example because mental health programs very much focus on risk and suicidal risk and homicidal risk, there was mandating of questions and approaches that we had to put in as some of the first questions when we see people, which goes against all of the things we talked about before in terms of treatment philosophy.

So, rather than understanding that we have different 18 19 treatment models and treatment philosophies in a different 20 way, different population, different approaches, it was this sort of in some ways bulldozer approach of, you know, 21 we're developing something in the larger mental health 22 23 program, you guys are essentially like a mental health 24 program, so we're just going to roll it out to you guys as well, without understanding that that actually has negative 25 impacts for the treatment models and the approaches that we 26 27 take.

So that's a very concrete example of my experience of that, and the challenges that - I had to spend most of my time educating my mental health colleagues as to why this wasn't a good idea and why we had to reverse it, rather than spending time focusing on helping clients and families.

And I think that's the big issue. The big issue is, you know, while they are integrated they are different models, and we need to be very careful that the evidence base and what works in this system isn't steamrolled, you know, to fit in with the larger machinery of the public mental health apparatus.

43 MS BATTEN: Thank you. Dr Gruenert, can I ask you, what 44 do you think are some of the adverse impacts and what can 45 be done to ameliorate against those?

47

1 2

3

4

5

6

7

8

9

17

28

35

42

46

DR GRUENERT: Yeah, I agree 100 per cent with Dan there,

that we can all see the benefits of bringing those systems 1 2 approaches and the additional resources and benefits to the drug and alcohol system, but I think one of the tensions 3 4 and the issues the Commissioners are going to be struggling 5 with here is the resources involved and required and 6 available and working within those resources. And I think 7 the biggest adverse impact would be to completely lose some 8 of the efficiencies that exist within the drug treatment system by inadvertently putting quality and risk mechanisms 9 and compliance things that just increase the overheads and 10 the work required where it's actually not fit for purpose 11 12 and isn't required and it will just increase the cost of services in some areas. 13

I think, as Dan said, there's so many examples where a policy or a thing has been developed, you know, the residential facility guidelines have come from mental health and they thought with a few tweaks this could be made to fit drug and alcohol, but it's a completely different model: we don't need nurse stations with observations around people's bedrooms and things, you know. Bedrooms, they spend so little time there that they need to be on the floor participating with the program.

25 There was a recent example during COVID where, there's a great Telstra initiative of giving out mobile phones and 26 27 SIM cards and computers so that people can engage in 28 telehealth, and they developed guidelines in mental health and were just going to roll it out across drug and alcohol. 29 30 And we said, wait a minute, you want to give out all of 31 this stuff and you expect it all returned at the end? Who's going to be responsible if it's not returned, if it's 32 sold off and hocked? Just things that hadn't been thought 33 about that really need to be - you know, frameworks and 34 things that need to be built from the ground up for drug 35 and alcohol, not just a tweak to mental health. 36

I think the last point from me, or the last two points: the drug treatment sector has had a lot of flexibility to innovate, and whilst the sort of lack of governance and rigorous guidelines and things have often been an issue and can be improved, they have allowed a very nimble quick system to adapt to things.

So, when COVID came along, the services moved to
telehealth and phone-based support really quickly and they
were able to do some quick consultations to make sure there

14 15

16

17

18 19

20

21

22 23

24

37

44

1 was new guidelines and resources from Turning Point and 2 others in place to support that, rather than building 3 incredibly onerous clinical governance systems that would 4 have taken a lot longer to roll out.

The second issue that's unique to the drug and alcohol sector I think relates to issues of criminality and the sensitivity of some of the issues in drug and alcohol politically.

And, it's always been a really strong point that, to 11 12 have people with strong advocacy, we've had to work really long and hard to get evidence-based programs funded in drug 13 treatment rather than be at the whims of what individuals 14 think will work in drug treatment, whether that's community 15 16 members or Members of Parliament, and we need really strong 17 advocates in the Department that can push those models and aren't concerned and nervous that there's an election 18 19 coming up so we can't talk about whether it's, you know, decriminalisation or pill testing or harm reduction 20 measures in prisons or a whole range of other things. 21 We need a unit that has the strength and sufficient size, you 22 23 know, not just be 5 per cent of a Department and does get 24 steamrolled.

So, I think if there are mechanisms that can be put in 26 27 place that ensure the processes really do build things from 28 the ground up within drug and alcohol as much as they're commenting on mental health things, and that ensures some 29 30 efficiency in the system and we're not putting unnecessary 31 layers on top of services that are suitable for clinical 32 and tertiary end of the spectrum but not for some of the psychosocial supports, then there's a chance this could 33 work. 34

MS BATTEN: Thank you. Dr Reilly, I feel like I've already asked you this question in relation to Queensland, but is there anything else you wanted to say in response?

40 DR REILLY: Just a quick comment. Stefan, with regard to 41 COVID and the mental health service creating massive 42 governance models that will take a long time, I'm not aware 43 what they were, but I certainly wasn't involved in such 44 things that I know of.

46 Yeah, I think the only other comment that I would make 47 is, some of the concerns - and I understand the concerns

5 6

7

8

9

10

25

35

39

1 completely, don't disagree - I think they also stem from a 2 very separate service system because they're all really 3 about saying, the mental health service system doesn't 4 understand us so we need to stay separate. I accept that, 5 that's the way to approach it.

I think the problem is though when we're talking about all of those issues, they can change if the mental health service system actually sees that AOD services are a core part of mental health services. The problem at the moment is, as Dan and as Stefan have highlighted, is that that's not the way that people think.

And I agree that it's not possible to just change like 14 that. So, therefore there is the challenge with regard to, 15 16 and if you were to say let's integrate, how you would do that, how you would protect that along the lines that I was 17 talking about before, so I think that's how any adverse 18 19 impacts would have to be addressed and what you'd have to 20 do is to have, you know, a good kind of ringfencing of AOD and monitoring and a gradual development of knowledge and 21 skills that works across the wider service system were that 22 23 to be contemplated.

25 PROFESSOR LUBMAN: Can I just add, I know we ventilated it 26 somewhat, we can expand on it later when we talk about the 27 addiction medical specialists, but I think that is a big 28 huge gap.

The comment I made before when I sit on a lot of the Chief Psychiatrist's committees around morbidity, mortality and complex care is because unfortunately I sit on those because there aren't many of me in Victoria.

35 And so, one of the issues is, if we're trying to integrate alcohol and drug and mental health, the reality 36 37 is professional groups talk to professional groups, and so, I get invited to so many - when we talk about alcohol and 38 39 drug I get invited all the time and that's because 40 unfortunately there's only very few of me available and 41 that's the tragedy in Victoria, that we don't have a - you 42 know, a breadth of addiction medical expertise that can 43 work with our colleagues in the mental health space to 44 actually advocate for what's needed, to actually help build 45 knowledge and clinical systems and expertise, and I think, without that, you know, there's that whole missing gap in 46 47 terms of a workforce that can communicate and link and

6 7

8

9 10

11 12

13

24

29

34

1 build confidence in their colleagues.

2

10

14

17

28

36

44

MS BATTEN: I'm going to turn straight to workforce capability and the addiction specialist issue, and stay with you, Professor Lubman, are you able to articulate very briefly why there is this gap of 20 years of lack of addiction specialists in Victoria and then move swiftly onto what's needed to increase the number of addiction specialists.

PROFESSOR LUBMAN: So, thank you. So, I tried to articulate in the witness statement sort of the, I suppose, how we got here and how we got here was really --

MS BATTEN: Sorry, Professor, not the how, the why. Do you know the why? I know that there's --

PROFESSOR LUBMAN: 18 The how is the why. The how and the 19 why is integrated because, you know, why is because, you 20 know, an unintended consequence of de-institutionalisation was the failure to recognise the need for a clinical 21 addiction stream as part of service delivery in Victoria, 22 23 and so, you know, there was a misunderstanding at that time 24 and that sort of failure and essentially unintended 25 consequence of a policy decision has meant for the last 20 years we haven't had a systematised clinical addiction 26 27 stream in Victoria.

A by-product of that has meant that there hasn't been an opportunity for medical nursing and allied health professionals to actually train within those settings, within addiction settings, to actually get the clinical expertise and capabilities. It happens essentially by random and, you know, on an ad hoc basis rather than as part of a thought out system.

37 So, we have a whole generation of health professionals 38 who know nothing about addiction, and in fact know as much 39 about addiction from The Herald Sun as they do from their 40 undergraduate curricular. And that explains why we have 41 such huge amount of stigma and discrimination that you 42 would have heard from consumers throughout the Royal 43 Commission process.

We have a whole generation of health professionals who really don't know what to do, and that's not just within the mental health space but includes in primary care, and that's a critical issue because we're seeing a whole generation of GPs who trained in the old system who are starting to retire and they are the backbone of opiate prescribing in Victoria, and within the next five to 10 years we're going to hit a major catastrophe in terms of prescribing around opiates if we don't do something to fill that gap.

So that's how we got there from an unintended consequence of a policy decision. Why we're in this position is because we don't have career pathway funded positions, and because we don't have - if we look at all the senior positions in mental health, clinical - you know, in mental health, a lot of those positions are also joint academic positions which allows in-reach into the university system to train undergraduates both in medicine, nursing, allied health in terms of mental health.

19 Because we don't have that senior clinical addiction 20 stream, we don't have senior staff in those medical nursing/allied health positions with academic positions, so 21 we have no presence on undergraduate/postgraduate 22 23 curricula, so there's a huge gap here that we need to fill 24 because otherwise, no matter what we do in this space, no matter how much we talk about integration, if we don't have 25 a senior clinical addiction workforce in place, you know, 26 27 we're never going to address this issue of the poor 28 treatment of people with addiction and addiction with comorbid mental health issues. 29

31 And it's always been a surprise to me that, you know, how the Department - not this Department - how the thinking 32 has been that, you know, for a clearly - you know, a clear 33 health problem, that the Health Department can say that we 34 35 don't need medical specialists to oversee, you know, treatment for those with most complex needs. It's akin to 36 37 saying in the hospital system and the mental health system we should de-fund all psychiatrists and clinical 38 39 specialists and they should use MBS items if they need a 40 specialist opinion.

So, you know, there's a huge discrepancy between what we see in health and mental health and that discrepancy, I think, speaks to the discrimination and stigma that we see for this population group.

MS BATTEN: In terms of rectifying the number of addiction

8

9

10

11 12

13

14 15

16

17

18

30

41

specialists, you've mentioned career pathways; what needs to be done to increase the number of specialists and what kinds of organisations need to be involved?

5 PROFESSOR LUBMAN: Yes, so I just wanted to flag for the Commission that we've been working for a couple of years 6 7 now with the Department in terms of an addiction/medicine 8 training - a workforce program. So, we've been able to secure positions within the College of Psychiatrists and 9 the College of Physicians to create a coordinated training 10 for addiction positions in Victoria. So, we've got a 11 12 training program and a couple of coordinators training, which is fantastic. 13

15 We're also just about to release a report which we 16 commissioned from HMA, a consultancy firm that's working with sales in the Department to look at the development of 17 an addiction medical specialist workforce model for 18 19 Victoria. So, they've been doing a lot of work looking at existing models, of workforce models, consulting with 20 experts across other jurisdictions and internationally 21 around what's needed to happen, and their report is going 22 23 to be available within the next two months which I would 24 urge the Commission to look at, which estimates the number 25 of addiction specialist positions that are needed and training positions. That figure's around 110 based on 26 27 modelling, based on another jurisdictions.

28

38

4

14

29 I can tell you that we are a long way from that figure 30 in Victoria and, despite having coordinated training, the 31 biggest issue we have is, we don't actually have many - a 32 clear strategy around funding, funding training positions. So, there's an issue around funding of training positions. 33 There's an issue about accreditation of supervisors, so we 34 don't actually have many funded addiction specialists in 35 Victoria who can actually oversee trainees and provide that 36 37 specialist pathway.

39 And it's a very hard sell - I mean, John will be able 40 to talk about this because one of his key roles is around 41 oversighting training for addiction psychiatry across 42 Australia and New Zealand. But we have a lot of very 43 interested trainees but the problem is, is that there's no 44 job at the end of it. Why would anyone want to put their hand up to do that job? So we need to actually have a 45 career pathway where we have training positions, accredited 46 47 placements and actually a job at the end of it, so we need

to have publically-funded addiction specialist positions and a model that actually speaks to where they sit in the system of care.

MS BATTEN: Thank you. Dr Reilly, do you have views on what can be done to increase the number of addiction specialists in Victoria?

Well, I think, as - I generally support what 9 DR REILLY: Dan said. Clearly there need to be positions for medical 10 addiction specialists. I think that that issue of training 11 12 is vital, and I think that coming back to it from the co-occurring substance use and other mental health 13 disorders focus, then as I've highlighted in my submission, 14 15 I turned into sub-specialists and generalist specialists 16 along the lines of the UK paper. And I do think that we 17 have to train all psychiatrists as being generalist specialists going across all of psychiatry which includes 18 19 addiction. That doesn't mean that they're at that level of addiction sub-specialist, whether they're an addiction 20 psychiatrist or addiction medicine specialist, but I think 21 that's what we need to be thinking. 22

24 And so therefore what we have to be thinking is what are the ways we create training positions; certainly within 25 sub-specialist addiction services, but also how do we 26 27 emphasise that, of course, we've got enormous prevalence of 28 comorbid substance use disorders within our training services that all of our psychiatry trainees are going 29 30 through and we need to ensure that in fact we seize those 31 training opportunities which at the moment we don't because 32 people don't actually know what are good models of care, they're not identifying them, they're not assessing them, 33 they're not treating the co-occurring substance use. 34

And if we did that we would certainly be building the capacity, but to do that we would have to actually be able so start that process off and, because we don't have that core group of addiction sub-specialists and because we don't have that mindset, at the moment we can't. So, I could go into much more detail but that's probably the best thing at the moment.

44 MS BATTEN: Dr Gruenert, do you have views on what can be 45 done to increase the number of addiction specialists?

46 47

43

4 5

6

7

8

23

35

DR GRUENERT: Yeah, look, John and Dan are the experts in

this particular area and I would defer to them on the 1 2 particular pathways, but I will add two things. One, we're 3 talking about a long-term, I guess, timeframe in order to 4 achieve this from where we are in Victoria and we clearly need some things in the interim to get us there. 5 And I 6 think, if we are to achieve the sort of capacity in the 7 mental health system, we definitely need some input from 8 addiction specialists there.

The key point I'd make is that we need to go beyond -10 so, addiction medicine is a massive gap in the Victorian 11 12 AOD system and I think that's impacting on the integration of care for people with mental health issues, but we've 13 certainly got a lack of pathways and pipelines for a senior 14 workforce across all sorts of disciplines in drug 15 treatment, and I think we also need to have a strategy 16 17 that - because, as Dan says, people do talk to their peers, so we need it at all levels, from social work, nursing, 18 19 psychiatry, medicine, GPs and psychology all the way 20 through the system.

22 The second point I make really relates to workforce 23 We know that simply study, theoretical development. 24 programs, don't develop a capable workforce and what we need is really a lot of on-the-job training, and there's 25 really good models and mechanisms in medicine and health 26 27 for - and, you know, in other disciplines, for placements 28 where people can learn on the job with proper supervision and support, including staff from mental health coming and 29 30 doing rotations through drug and alcohol services at 31 various levels to help build that capacity which just 32 simply aren't there.

And, we know that that's the best way to breakdown 34 stigma. We have lots of graduates who, even if they've 35 done some mental health or some addiction, which is pretty 36 37 rare in any university degree, the minute they are confronted with someone, particularly if they're 38 39 intoxicated or in a crisis, the stigma and all their 40 systems go into defence alert mode, so they need to be able 41 to have real relationships with consumers in a variety of 42 settings to build up that confidence and to understand 43 people in a way that breaks down those barriers. 44

45 So, the models of workforce development have to be 46 embedded in services and they have to lead to some funded 47 positions, as Dan said, out the other end. That applies

9

21

1 across all the disciplines, but I totally agree there's a 2 real gap in addiction medicine, but we're talking 3 multiple years to start filling that, but we can start the 4 rotations and the practices as soon as possible to make the 5 most of the people we do have in the system before they 6 retire.

8 MS BATTEN: Okay.

7

9

12

14

19

21

26

34

45

10 DR REILLY: And so I do have to jump in and say, it's not 11 just addiction medicine but it's also addiction psychiatry.

13 DR GRUENERT: And psychiatry.

DR REILLY: Because unfortunately that does separate out and that's actually a problem in a lot of documents. I understand Stefan's not meaning that, but that is part of the problem so I just need to be clear about that.

20 DR GRUENERT: Agree.

MS BATTEN: I do want to ask about the increase in the workforce generally. Dr Gruenert, I might go to the others and then come back to you to see if there's anything further you want to add.

Dr Reilly, perhaps I'll ask this directly to you first: how do we increase the capacity of the workforce generally? So we've talked about addiction specialists acknowledging that there's addiction psychiatrists and addiction medicine specialists, so the capacity of the workforce beyond them to address co-occurring mental illness and substance use issues?

I think, as we discussed originally, Fiona, 35 DR REILLY: the issue there is, I do think that - I maybe being 36 medically centric - but I think it's reasonable to start 37 with medical specialists because if they lack capacity, 38 39 then it's very difficult for anyone else to come in over 40 the top of them - I'm not saying impossible, but it makes 41 it much harder because they are often taking significant clinical decisions. So, I think, if we've got that, then 42 43 what we have got is that people are in fact, as Stefan 44 said, learning on the job.

46 If we can train our psychiatrists in the mental health 47 service system to actually be competent and capable in 1 managing co-occurring substance use disorders, that helps 2 to pull other people along.

I think the other issue is then trying to get more crossover, that people do have those training experiences at all levels of training and, whilst we've got separate service systems, that's much harder. I think that if the service system is more integrated there's greater capacity to start to make those links and connections, but clearly that's still very difficult at this point.

12 MS BATTEN: Professor Lubman, do you have views on how we 13 can increase the capacity of the workforce to deal with 14 co-occurring issues?

I mean, I have a couple of things to 16 PROFESSOR LUBMAN: 17 say. I mean, I think if we go back 10, 20 years, we had the establishment of the Victorian Dual Diagnosis 18 19 Initiative which at the time I think was a brilliant 20 initiative because it was really increasing people's awareness of the interrelationship between mental health 21 and alcohol and drug issues. And I think, for its time, it 22 23 was a great initiative and it was very successful in 24 increasing awareness.

The challenge with that initiative is that there wasn't - the strategy for what it was trying to achieve became outdated and there wasn't governance over what the initiative was actually trying to achieve, and the backbone of that initiative became didactic training which we know in workforce models is not an effective way of changing practice.

I think I speak for all of us when we say that, you 34 know, if we want to increase the capability of the 35 workforce we actually have to do competency-based training; 36 37 we have to actually - you know, the whole model of working in the field of health and medicine is around, you know, 38 39 seeing something, doing something, teaching something. You 40 know, that does not - you know, if I want to teach somebody 41 how to deliver a baby, I do not do a half an hour workshop on the theoretical ideas of delivering a baby and then send 42 43 people out delivering babies.

45 You know, because that's easy to do and because we can 46 do it at a mass level, you know, unfortunately that's been 47 sort of the way in which training has been delivered in

3 4

5

6

7

8

9

10 11

15

25

33

this space: let's do a couple of one day workshops and then we'll see change.

I think what John's referred to, is that, we've had a number of examples where we've worked with different professional groups to increase the capacity, but then they go into a mental health service where the consultant psychiatrist is not interested in substance use, doesn't want to know about it, and so, there's no mechanism to actually provide evidence-based alcohol and drug intervention into that setting because the medical leadership in that team does not feel capable or does not see it as a priority, so there is something about prioritising that medical workforce.

16 One of the initiatives that we were able to get funded a couple of years ago was to identify - and, building on 17 what John said, there are a number of consultants across 18 19 Victoria who recognised that they need to increase their 20 skill mix in the treatment of addiction, and we were able to get some funding from the Department to actually have 21 22 that person come and sit with us one day a week for 23 18 months to work in an opiate pharmacotherapy clinic, to 24 see a whole range of people with co-occurring disorders to become skilled in that space, and they then were able to 25 return to their area mental health service and adopt the 26 27 lead role as a portfolio holder for addiction and 28 co-occurring substance abuse disorders in their mental 29 health program.

31 So, there are opportunities for looking at how we 32 create, not necessarily just addiction specialist 33 expertise, but how we build the capabilities of medical 34 leadership in the different area services so that we can 35 have people who are very skilled in this space, who want to 36 upskill their colleagues and want to create models of care 37 that actually work.

39 So, for me, it's very much about competent models, 40 opportunities to work under supervision and to actually 41 see what - you know, practice what's happening under that 42 supervision and to feel capable and being able to then 43 share that knowledge with their colleagues.

I just want to also add comment to what Stefan says
when we talk about the workforce. I mean, I think
unfortunately what we see very much strongly in the alcohol

3 4

5 6

7

8

9

10

11 12

13

14 15

30

38

44

and drug space, is that, a lot of the funding models mean that, when we do get very highly-skilled, senior nursing and allied health professionals, there's not a career pathway for them in the alcohol and drug space because we don't have this sort of tertiary clinical addiction stream.

7 What that means is, is then you know, we spend a lot 8 of time training up these really experienced nurses and 9 allied health staff, and they end up moving into mental 10 health because they pay better, and not necessarily into 11 roles that actually play to their strengths in terms of 12 knowledge and expertise in the alcohol and drug space.

So, when we're thinking about this area of a tertiary 14 15 clinical addiction stream, it is about not just a career pathway for doctors and having clear specialists in the 16 17 space of the broader mental health system, but it's also being able to retain specialists in nursing allied health 18 19 to be able to continue to provide their expertise both 20 within the sector and to be able to in-reach into other sectors and to work with their colleagues. 21

MS BATTEN: Thank you. Dr Gruenert, was there anything you wanted to add in terms of developing workforce capability?

27 DR GRUENERT: I think the issues have been pretty well 28 covered. The only point I would add is that, for this to 29 work, if we're really serious about changing both the 30 culture within drug and alcohol and mental health and 31 delivering better care for people, we need a sustainable 32 strategy.

34 So, one-off little injections have never worked because we always had turnover of our workforce and, if we 35 want our investment in the area to really have a lasting 36 37 and a real benefit, it does need some level of sustaining over time. And that includes - I think is why I'm so keen 38 39 on some dedicated funded positions because I'm sympathetic 40 to the arguments that Dan's put forward around, you know, 41 sometimes when resources are tight, you know, money can get 42 lost in a pool and it'll get used in other ways.

44 So, in including some of those outreach of your staff 45 models so they keep some specialist connection to their 46 sector but are seen as a dedicated role to support people 47 in the other sector, and that's worked really well across

6

13

22

26

33

child and family supporting drug treatment and family
 violence where you've got some specialist funded positions
 that really do build the capacity.

We don't though just want people that are sort of in training roles, they really need to be on the ground, you know, with the capacity to work and do some clinical work as well across those disciplines, but I think the rest of the issues have been well covered.

11 MS BATTEN: Thank you. I'm going to turn to the final 12 question and then hand over to the Commissioners, which is 13 on the issue of prioritising and, Dr Gruenert, I might stay 14 with you and so ask you to respond first.

16 In the context of this Royal Commission into 17 Victoria's mental health system and considering the reality 18 of rationed resources, for Victorians with mental illness 19 and substance abuse issues, what are the priorities of 20 allocation of resources?

22 DR GRUENERT: So, the two priorities for me would be to, 23 firstly, have specialist funded positions within both 24 sectors that can ensure that, when someone seeks help and 25 support, they can get a response from that sector that provides, you know, holistic care - whether you call it 26 27 integrated or not - that meets their needs and prevents the 28 need for them to be referred elsewhere in the most cases. So, the majority of people can be supported within each 29 30 sector without having to swamp or overwhelm or be shunted 31 back and forth between sectors, so some dedicated 32 specialist positions.

And the second one is, I do agree there's a gap in the 34 specialist addiction psychiatry and medicine that will 35 support the decision-making and the governance and the 36 37 training across the board. I just have some anxiety that that becomes the dominant framework if the focus is only 38 39 there and that we don't value, you know, peer workers, 40 people with lived experience, social work and psychology, 41 nursing, across the whole spectrum.

43 MS BATTEN: Thank you. Dr Reilly, can I turn to you and 44 ask what would be your priorities for the allocation of 45 resources?

DR REILLY: Sure. So, I think I'm not clear whether

4 5

6

7

8

9 10

15

21

33

42

Victoria's mental health service system along the lines 1 2 that what I was saying without our dual diagnosis toolkit 3 and the four quadrants, at least there's a clear statement 4 - I'm not saying necessarily followed in Queensland, but at least a clear statement that in Quadrant 4 there is an 5 6 expectation of co-occurring substance use disorders being 7 looked after by the mental health service. I don't know if 8 that's the case in Victoria, there may be a document that says that, but it's not clear to me. 9

So I think that that policy issue doesn't cost a cent, it costs some thinking though and a decision that that would be required, and obviously that might lead onto issues about capacity, but I think that's the first step.

After that, then it's really about, well, if that's required and if that's what the - you know, the Department says, how is that being implemented? Because the message seems to be, well, it's not being implemented at the moment effectively and, if that's the case, then how would you do that?

23 And I quess, as I've said in my submission, really 24 that then comes down to having a clear model around that expectation that mental health services do provide 25 treatment for co-occurring substance use disorders. 26 And, 27 to do that, my simplest approach would still be - and, this 28 is without fund - I agree completely, Dan has already highlighted that we would need to develop that specialist 29 30 addiction capacity - but, if you didn't have any funds, 31 then I would still be saying that it should be possible to 32 get training for psychiatry trainees to all have a mandatory experience in addiction. And, doing that, the 33 simplest way I can see at the moment is still the 34 consultation liaison term should be integrated, but there 35 should be a greater focus on that co-occurring substance 36 37 use disorder within all of their training.

That's absolutely cut back to nothing, just saying, that's what I would start with.

42 MS BATTEN: Thank you, Mr Reilly. Professor Lubman, what 43 do you say as the priorities for the allocation of 44 resources?

PROFESSOR LUBMAN: Yeah, I think, as I said throughout my
witness statement, I mean, I think the big missing gap is

10

11 12

13

14 15

22

38

41

45

the clinical addiction stream that's been missing since de-institutionalisation. For me, that's a stream that's multidisciplinary, and that's not just addiction medical specialists, but also nursing, allied health, senior peer navigators, a multidisciplinary team.

That I would see a series of clinical hubs across Victoria that are in-reach both into the mental health system, into the general hospital system, into the alcohol and drug system and providing support to primary care.

12 So I think that sort of clinical hub and spoke model of a tertiary/clinical addiction stream of expertise would 13 provide, you know, a huge boost in terms of addressing the 14 many harms associated with addiction issues that we see 15 16 across our general hospital, primary care, alcohol and drug and mental health settings, and I think that is a priority 17 in terms of, if we want to address the issues of 18 19 (indistinct) care.

21 MS BATTEN: Thank you very much. Sorry, Dr Gruenert, I'll 22 go back to you.

24 DR GRUENERT: Can I just add there: I mean, I think that's a really important issue but I see it as a two-way 25 thing. The drug treatment sector also needs the support 26 27 around mental health to ensure that we don't - you know, we 28 can manage most of the people that seek help from us within our - so, I see that model that Dan was talking about as a 29 30 two-way thing, so we're actually bringing in the mental 31 health expertise into drug and alcohol as much as we're 32 putting drug and alcohol expertise into mental health.

34 PROFESSOR LUBMAN: Can I just - on that, Stefan, I So, for example, as I would see in this 35 completely agree. stream, we would have at addiction psychiatry stream. 36 So, 37 we run an addiction psychiatry clinic at Turning Point, and I can tell you that we have to stop our waiting list 38 39 because we have, you know, less than 0.5 EFT to offer that 40 clinic, and we are inundated by AOD providers and GPs and 41 the mental health system asking for advice around how to 42 manage the cases.

So, you know, you set one of these things up, there is huge demand in the system, both providing the addiction mental health piece; we know that this is a huge gap and we know that there's huge demand, but we need - this is a huge

6 7

8

9 10

11

20

23

33

43

missing piece.

1 2

12

17

24 25

26 27

28

29

3 And my colleagues - unfortunately, my colleagues here 4 work in private mental health, in the private system; again, there's very limited expertise in addiction. 5 And, you know, we get referrals of, you know, many, many 6 7 hundreds of people who just cannot access the right 8 treatment in the private mental health system because they have a co-occurring substance use disorder and our private 9 colleagues don't feel they have the expertise to actually 10 manage that comorbidity. 11

MS BATTEN: I'm going to hand over to the Chair now,
unless there's any final comments? Okay. Thank you,
Chair, I'll hand over to you for the Commissioners'
questions.

18 THE CHAIR: Thank you very much to the panel members and 19 to you, Fiona, as well for leading that discussion, it was 20 fabulously informative and has I think given us a lot of 21 insight into what some of the opportunities as well as the 22 challenges might be in terms of us building our future 23 system that's more responsive to these issues.

I guess, one of the issues - and, just to go to your suggestion, Professor Lubman, about the series of clinical hubs that could in-reach: do you think that would make a difference to some of the volatility that we currently see?

30 I think we all talked about the stigma associated with 31 mental illness and drug addiction. We've got real challenges right now in Victoria where we hear from 32 consumers, we hear from service providers about the fact 33 that too many people are getting very unwell, presenting; 34 police picking them up, or ambulance, being taken to an ED, 35 some being admitted to an inpatient unit in highly agitated 36 37 volatile states; no-one feeling that well able to cope with it, having high incidences of occupational violence and 38 39 associated issues.

And so we're, in addition to taking a long-term strategy about how we're going to improve our capability in this sector, facing some pretty immediate challenges about whether or not we're running services that have models of care that are providing for the safety and needs of all consumers.

47

40

1 So, is there models of care that are available that 2 can help with this? Are they existing in Queensland or 3 other jurisdictions? But can you just talk to us about how 4 you think we might address this issue, because it is an 5 exacerbating problem but also adding to the stigma around 6 these issues in the community and in service providers.

8 PROFESSOR LUBMAN: Yeah, I mean, I think it's a really I mean, I would say there's a couple of 9 great point. things here: one is that there's a belief in the system 10 that treatment doesn't work; that there's a nihilism across 11 12 the health system, across the police system, across the paramedic system, across the EDs, that if you have an 13 alcohol and drug disorder, you know, that basically there's 14 no way you're going to recover. 15

17 That's what we hear consistently in the media. We don't have any visible champions out there telling us that 18 19 there's anything different. If nobody spoke up about 20 recovery from cancer, you know, what we saw 30 years ago when we didn't see anyone who would actually recover from 21 cancer, there was a belief that cancer was a death sentence 22 23 and, because of that people - you know, when I trained as a 24 medical student I would see people presenting to cancer clinics with end stage cancer because they were so 25 embarrassed that they had cancer, they feel nihilistic 26 27 around feeling that there's any treatment, that they didn't 28 actually seek treatment until they had all these 29 complications.

31 So, I think the issue for us is, you know, because of this failure to have a clinical addiction stream, nowhere 32 in the undergraduate, or postgraduate training, or in the 33 everyday lives of people who work in the health system do 34 they come across people who actually are experts in this 35 who can tell stories around what works, who can actually 36 37 demonstrate what the interventions actually are, there's none of that visibility. 38

40 So for me, you know, one of the biggest issues working 41 - I'm fortunate to be able to work in a large hospital 42 network and I'm able to go to medical ground rounds with my 43 colleagues from ED and psychiatry and general medicine, and 44 I'm able to work across those distant basis, and certainly 45 when I first started in this role all I heard consistently was, you know, why do you see these people, they never get 46 47 better, nothing ever works, it's a waste of time, you know,

7

16

30

39

they should be treated in the criminal system. And it's only by actually being there, being able to be part of the system and demonstrating what is possible, that we're actually able to change people's views and attitudes in this space.

Because the evidence is pretty strong that we have evidence-based treatments that actually work, we don't have to go far to actually search high wire for them. There's very good strong evidence of good treatment models for the treatments and good outcomes for the patients that we see.

In fact, for people with schizophrenia, for example, who don't have a substance abuse disorder have worse outcomes long-term, in terms of their prognosis, than people with a substance use disorder. So, substance use disorder is a good predictor of good prognosis because, if we address that, it's likely that their psychosis will massively improve.

21 So, there's all these positives around, you know, how/what we can do, but the issue is, is that, we are not 22 23 present in the health system, we're not with colleagues in 24 other areas of health who see what we're able to provide. 25 We're not working alongside paramedics or police or other aspects of the system, and so, there's a general nihilism, 26 27 nihilism in the community; people don't come to treatment 28 until it's too late, people don't believe it works, people don't think about referring us to actually have 29 30 evidence-based treatment.

So, for me, this is a critical gap in terms of presence and visibility and our ability to influence, you know, what can happen in the health system.

THE CHAIR: Thank you. And, can I go to you, Dr Reilly: is that different in Queensland where you've got an integrated model, or are you equally challenged by the issue that we are facing here in Victoria at the moment? 40

41 DR REILLY: No, absolutely equally challenged. I think 42 that though - I understand what Dan's saying and I don't 43 disagree fully, but I do think that psychiatrists have been 44 dealing certainly with people presenting with 45 substance-related psychosis and acute psychotic episodes 46 not related to substance use with aggression for a very 47 long time, so I actually do think that they can manage and

6 7

8

9

10

11 12

20

31

contain that.

1 2

14

26

29

33

3 I think that the challenge is though that, if it is in 4 fact say amphetamine related, then they don't have a mindset that this is an ongoing issue that they might now 5 6 need to be involved in addressing and working with, they 7 don't feel confident, and instead what they want to do is to say, oh well, it's amphetamine related, it's not my 8 9 problem, someone else should be coming in and taking 10 responsibility for that; rather than, in a sense, taking over the ownership of that because we haven't set up that 11 sense, as Dan said, that this is something that they need 12 to do, we've instead allowed that to be externalised. 13

15 So I do think - now, they can manage the acute, but 16 they don't - you know, they will complain about that because they don't see it as really something they should 17 be doing; along the lines that Dan was just saying he's 18 19 always had, it should instead be something else that 20 someone else should somehow deal with, whether that's the criminal justice system or somehow some other magic 21 specialist who's going to come along to deal with this 22 23 I think that's a fantasy, but nevertheless it issue. 24 continues to exist in many mental health services and 25 clinicians.

THE CHAIR: Thank you. Dr Cockram, do you want to ask the panel a question?

COMMISSIONER COCKRAM: Yeah, my question, I think I'm
 going to ask Dr Gruenert this first but, if I could, with
 this single question come back to Professor Lubman.

34 If we postulate, and the group has postulated the potential opportunities of creating a more cohesive shared 35 vision at a Department level of both AOD and mental health, 36 37 and perhaps having a policy and planning setting that supports that, but I also think that you have particularly 38 39 highlighted the importance of maintaining a commissioned 40 service system that is fit for purpose and separate where 41 needed. I'm interested in your thoughts where we bring 42 those systems back together again, perhaps in integrated 43 community environments, and people have talked about that. 44

How do we governance to support both models of care at
that more local integration as opposed to at the state
Department, and have you seen shared governance models or

1 collaborative models that you think might work; i.e. not 2 one or the other, but both, is what I'm asking?

4 DR GRUENERT: Thank you for the question. I think where 5 I've seen it work best has been in escalation models for 6 more complex people, and I've certainly raised this issue 7 with the Chair in terms of some services that Odyssey ran 8 in New Zealand where people in residential drug treatment services, if they become particularly unwell around their 9 mental health issues, have meant they've been unable to 10 really participate in drug treatment, and the size and 11 12 scale of those programmes does not support the sort of de-escalation of those symptoms and management of those, 13 and there's been a specialist dual diagnosis program that's 14 residential, small in numbers, and it has access to 15 16 psychiatry and addiction medicine and higher staff-to-resident ratios, and it's been really effective in 17 stabilising, you know, suicidality and people who have 18 19 schizophrenia who may be able to manage it from time to 20 time but it escalates into psychosis at times, and that's been well integrated and managed well. 21

23 I think equally, if you're talking at a local level in 24 some of the psychosocial services, there has been a greater 25 propensity, if you're talking about recovery, to integrate some of the sort of higher prevalence but lower severity 26 27 issues across drug treatment in mental health. So, I 28 think - but again, it's usually been because you've got some skilled clinicians who are experienced enough and know 29 30 where they can get support or access others to be able to 31 do that.

I haven't seen and I haven't read any evidence or seen 33 examples where there's been that full integration of 34 service provision at the local level between two systems 35 working well. All I've ever heard about is why it failed 36 37 and the tensions that existed and then people going their separate ways again, and it's largely come back to 38 39 philosophies approach. And also some differences in the 40 cohorts: you know, your services are better supporting 41 these, and more of your services are oriented to better 42 service that, and your services are more oriented to 43 service that.

Now, to some extent that's an example of what is, you
know, rather than what could be. But I think a lot of the
things we're trying to grapple with here, including the

3

22

32

chaos in the system and presenting to ED, are symptoms of 1 2 the system failing. And, you know, you're always going to 3 need some emphasis at that critical crisis, bottom of the 4 cliff end, but if we're getting the other parts right, and 5 that may just be properly resourcing both systems on what 6 they need to do, I think we're going to avoid a lot more 7 people presenting in crisis and really needing a full 8 integration even at a local service level.

10 COMMISSIONER COCKRAM: Thank vou. Professor Lubman, can I just sort of shift the question slightly. I quess, if 11 12 there's a shared vision, can there be a shared accountability at a system level? And particularly, say, 13 in a community integrated clinic or any other environment, 14 is there something the Commission should be thinking about, 15 16 about saying that, rather than either/or, that we're 17 creating some opportunity to get collaborative and shared accountability for a general success for a group of people 18 19 as opposed to one or the other?

PROFESSOR LUBMAN: That's a great question. I suppose the
thing that I suppose I would reflect on in that question is
this issue of differing populations.

25 So, there's clearly, I think - we've got a Venn diagram, so we've got one sphere here that is clearly in 26 27 the remit of alcohol and drug services, that there will be 28 some part of that Venn diagram that overlaps with mental health. And similarly, we've got the mental health system 29 that largely sits in the purview of the mental health 30 31 system with a small overlap in terms of the alcohol and 32 drug system, and then it's where there's overlapping nature, that's I think where we need to target. 33

I think, I suppose, my experiences of that is that, you know, that we can get shared governance arrangements and agreement as long as - you know, there's a couple of issues: one is around, how do we incentivise it, and what are the relevant policy levers around that?

But I think we can all share - and Stefan might be able to comment on this as well - I often find it's harder to actually do something in a shared way with other services than it is to do it by ourselves. The system actually puts in perverse incentives to make it more challenging, both in terms of our funding structures, in terms of our reporting, in terms of our information

9

20

24

34

40

sharing, in terms of our expectation, so the system 1 2 actually creates incentives not to work together. 3 4 So, in terms of having that shared governance, it's around making sure the system is incentivised to actually 5 6 work together, and so, identifying what those barriers are 7 to working together and actually looking to overcome them. 8 But my experience is, when you have organisations -9 and I've been involved in multiple projects where we've 10 had, you know, the senior leadership team of one 11 12 organisation and another recognise that this is what we want to do, we've got common sort of goals and a shared 13 perspective, and we want to work together to do that, we've 14 15 got some really great examples of where that's worked well 16 with the appropriate resourcing and the ability to direct 17 resources to do that. 18 19 So, I don't think that's too hard, but there's challenges in information sharing and other sort of - you 20 know, other bureaucratic processes that sometimes inhibit 21 the ability to actually deliver that. 22 23 24 COMMISSIONER COCKRAM: Okay, thank you. 25 26 THE CHAIR: Thank you. Professor Fels. 27 28 COMMISSIONER FELS: Well, I was going to ask, kind of, a conciliation type question and maybe you'll find yourself 29 30 just repeating what you have said, but I was going to ask 31 one of Dr Reilly and then Professor Lubman. 32 I mean, Dr Reilly, suppose contrary to what would be 33 your wishes I think, you received an edict from on high to 34 go back to a more separated system, what would you insist 35 should happen in that case? 36 37 38 Then I was going to ask Professor Lubman the opposite: 39 having heard a litany of reasons why the subject matters 40 are different and there should be a degree of separation; 41 but supposing, contrary to all of that, there were some 42 move to more substantial integration, what would your log 43 of demands be? 44 As I said, I think we've heard a fair bit already, but 45 I still would find it just useful to hear an answer to 46 47 those unthinkable propositions. Maybe, Dr Reilly.

2 DR REILLY: Sure, thank you, Professor Fels. I think that 3 absolutely would be unwanted of course but, if so, then at 4 a departmental level, fine, those things happen; and even then, if there was a disaggregation at an HHS level 5 6 following on from that and teams were - yeah, teams were 7 separated out again, I guess I'd still say that I think 8 from a clinical point of view at the level of the consumer what we should be looking to do nevertheless is to say 9 10 that, you can't split that, that that's not actually a kind of Government decision but that's actually about 11 12 evidence-based care, that the evidence-based care is for an integrated model. 13 14

15 And that, sure, we can split all of the systems, but 16 we nevertheless have to create structures which support and 17 encourage those integrated models of care, and that includes at the very least training models which ensure 18 19 that people working in both separate areas actually have 20 experience and work closely together and ensure that those training models cross over if it's been completely 21 de-integrated. 22

But, you know, it doesn't make sense, unfortunately, to go that way but that's what I would be perhaps arguing for most.

PROFESSOR LUBMAN: I suppose the point I would raise is that, often what we're doing is we're trying to retrofit systems. So, we have things that we wouldn't design in the first place, and then we're asked to how we put them together to somehow solve a problem that's very complex.

And so, in that context, I think for me the thing that we would really need to do very carefully if we were to integrate systems is, is we would have to take a step back and be really clear about what it is that we're trying to achieve.

So, for me, I think where we often fail to do the work is, we don't do the work in terms of demand modelling: understanding who are the populations in need, what are their characteristics, what do they need, what is the most appropriate way in which to sort of set up services to meet the different population needs that we see.

46 47

1

23 24

25

26 27

33

39

We don't then think about, what is the evidence base

in the care models that we have to create that are the most 1 2 effective. So, looking at the population and breaking them 3 down, and seeing how they look and seeing how we might need 4 to step up and step down our models of care; we don't 5 clearly define what those models of care are and what the 6 competencies and workforce makeup of those models of care 7 actually are; and, overarching that, then we don't think 8 about the quality framework and the principles of care that 9 underpin how those systems are designed.

So, for me, I think if we were to start from scratch, 11 12 for example, and you were to throw everything up again and we were to redesign the whole system, for me, as long as we 13 took a really clear evidence-based pragmatic approach where 14 we looked at what works, and we design the system that 15 16 actually meets the needs of individuals, and actually 17 articulates what it is we're trying to achieve and what workforce we actually need to do that, I would feel very 18 19 confident in that space.

My concerns are, is that we don't tend to think in that way strategically. We tend to say, we've got service X and service Y, you guys work together now, you know, and make it work, without any investment in models of care, the appropriate workforce, the clarity of the framework and the principles of work we want to achieve. So, for me, they're the things I think we need to think very carefully about.

29 COMMISSIONER FELS: Thank you.

31 THE CHAIR: Thank you. Professor McSherry.

Yes, I have a question about legal 33 COMMISSIONER McSHERRY: 34 frameworks for Professor Lubman, and I was interested, when you started off you mentioned how the Mental Health Act and 35 risk approaches has really driven where we are now with the 36 37 mental health system. We've also heard a lot throughout the course of this Commission about stigma in relation to 38 39 both sectors, we've heard a lot about law and order agendas 40 and so on.

So, I'm interested to get your perspective on the fact that we've long had legislation that enables compulsory treatment in the alcohol and other drugs sector, and at the moment we've got the Severe Substance Dependence Treatment Act, and yet that hasn't driven the AOD sector, and I'm just wondering whether you have any perspectives on why

10

20

28

30

32

that might be the case: whether it is just a matter of people falling within the compulsory mental health system instead or whether there's something else going on here?

PROFESSOR LUBMAN: Great question. Look, I've got to say, the Severe Substance Dependence Treatment Act is not a very workable Act. If you look at the number of people who have used that - who have come under the remit of that Act, you know, we're talking a very small percentage of the population.

12 It's very difficult to navigate, there's a lot of confusion around who's eligible. There's a lot of 13 confusion around - well, there's a lot of processes in 14 place in terms of how to make it work, and the duration of 15 16 the Act makes it a disincentive to use the Act because you're only - it's only relevant for a certain amount of 17 time. So, by the time you've got somebody in and using 18 19 it - you know, obviously we're talking about issues that are long-standing and complex, and using it for a very 20 distinct period of time, a short period of time, is really 21 not workable. 22

There's also - I mean, I think the biggest issue is, you know, I think within the mental health space there's greater clarity of, I suppose, when somebody is impaired in the mental health space. I think, as Stefan has talked about before, particularly in the alcohol and drug space, it is an incredibly political issue, so anyone in some ways who chooses to do something illegal is in some way impaired in one context, and so, there is a whole political overlay of what impairment means in the alcohol and drug space.

And I think, you know, certainly we see that every day when we are dealing with family members who come to us concerned about their loved ones and feeling, you know, unable to do anything and wanting us in some ways to forcibly, you know, apply treatment to people, you know.

And I think, you know, the challenge is, is for us, is around having a system - you know, often when we - and I say this in my submission, often when we create systems that are underpinned by legislation we actually create resources to enable that person to get good quality care.

The downside of our non-mandatory system is, we have services that aren't adequately resourced to actually meet

the needs of the individual, and I think they're the tensions that we constantly struggle with.

4 COMMISSIONER McSHERRY: Thank you.

6 THE CHAIR: Thank you.

3

7

10

12

27

37

39

8 MS BATTEN: Dr Gruenert has got something further to say, 9 just in case you missed it.

11 THE CHAIR: Thank you.

Commissioners, I just want to add one thing 13 DR GRUENERT: to that comment. Very few people actually access the drug 14 and alcohol system on a voluntary basis. Even though they 15 16 might not be mandated under any Act to do that, they're all 17 experiencing some pressure usually, and that may be pressure from Child Protection because they're going to 18 19 lose their child; it might be some legal issues that are 20 pending that are going to have significant impact on them if they don't choose to engage in treatment; it may be 21 pressure from a family member or a friend, or to be kicked 22 23 out of home, or a health issue that's pending, so there's 24 lots of other levers that motivate someone into treatment 25 which is, I think, also one reason why we wouldn't see the use of the Act as much as necessary. 26

28 And I quess, for me, it's critical, whichever decision or way the Commission chooses to go with these services and 29 30 the system and how it's designed, for me a fundamental is, 31 if we're continually assessing the voices of consumers and 32 those experiencing the system and the outcomes it's achieving and evolving the system over time, then I'm 33 always open to, you know, one model versus the other and 34 trialling different things in sort of a real evidence base 35 and evolution of the system. 36

38 THE CHAIR: Fantastic, thank you very much.

40 So, panel members and Ms Batten, thank you so much for 41 the discussion we've had today, it's been incredibly informative. It was very helpful, as I said at the 42 43 beginning, for the Commissioners to read your witness 44 statements, even greater help for us to hear and have the 45 opportunity to discuss some of these challenging issues with you and to reflect upon what you think is the 46 47 desirable future system.

And, it is definitely work-in-progress, you know, there's a level of flexibility required in our thinking about what direction we want to pursue and, given the Government has committed to implement the recommendations we put forward, we have a great sense of responsibility to do no harm in terms of ultimately what we recommend by these systems, and recognise both the strengths and opportunities for that, both service systems, and the strengths that the AOD sector has to bring to the table as well as the mental health system, and so, this has been a very, very helpful discussion for our deliberations, so thank you very much for your time. And, particularly Dr Reilly from interstate, thank you for being so committed to helping us in terms of trying to design a future mental health system here in Victoria. So, thank you all for your participation. AT 1.00PM THE COMMISSION ADJOURNED
